INTRODUCTION

The data included in this publication relate the member and associate member countries of the Caribbean Development and Co-operation Committee (CDCC) at the 31 December 1983. A list of these countries is given at page xvii. The publication is written in the three official languages of the CDCC viz. English, French and Spanish.

Efforts have been made to present complete data series for the ten-year period 1974-1983. The tables relating to Land use, Land tenure and Population have been revised to include the results of recent surveys. A number of new tables have been introduced, these include the long-term averages and ten-year rainfall series for each country and production data for important domestic food crops viz. yams, other root crops, peas and beans, tomatoes, cucumbers, eggplant, onion and pumpkin; however due to the lack of data it was not possible to present corresponding tables on the areas and yields of these crops.

The co-operation of the member and associate member countries of the CDCC in the preparation of this publication is gratefully acknowledged.

INTRODUCCION

Los datos incluidos en esta publicación se refieren a los países miembros y miembros asociados del Comité de Desarrollo y Cooperación del Caribe (CDCC) al 31 diciembre de 1983. Una lista de dichos países aparece en la página xvii. La publicación está redactada en los tres idiomas oficiales de CDCC, a saber, inglés, francés y español.

Se ha hecho esfuerzos por presentar series completos de datos para el período de 1974-1983. Las tablas relativas a la utilización y tenencia de la tierra y a la población han sido revisadas para incluir los resultados de encuestas recientes. Un número de tablas nuevas ha sido introducido. Dichas tablas incluyen los promedios a largo plazo y series decenales de pluviometría para cada país, así como datos de producción para cultivos alimenticios importantes de consumo interior, a saber: ñame, leguminosas de grano, tomate, pepino, henenjena, cebolla y calabaza. No obstante, debido a la falta de datos no ha sido posible presentar tablas correspondientes relativas a las áreas dedicadas a dichas cultivos o a su rendimiento.

Agradecemos el valioso concurso de los países miembros y miembros asociados del CDCC en la preparación de esta publicación.

INTRODUCTION

Les données présentées dans cette publication se rapportent aux pays membres et membres associés du Comité de Développement et de Coopération des Caraïbes (CDCC) au 31 décembre 1983. Une liste de ces pays figure à la page xvii. La publication est rédigée dans les trois langues officielles du CDCC, à savoir, l'anglais, le français et l'espagnol.

Des efforts ont été faits pour présenter des séries complètes de données pour la période 1974-1983. Les tableaux se rapportant à l'utilisation du sol, l'occupation des terres et la population ont été révisés pour inclure les résultats d'enquêtes récentes. Un certain nombre de tableaux nouveaux ont été introduits. Parmi eux figurent les moyennes à long terme et les séries décennales de pluviométrie pour chaque pays, ainsi que des données de production relatives à d'importantes cultures vivrières de consommation intérieure, à savoir: igname, légumineuses, tomate, concombre, aubergine, oignon et citrouille. Néanmoins, en raison de la pénurie de données il n'a pas été possible de présenter des tableaux correspondants relatifs aux superficies consacrées à ces cultures ou à leur rendement.

Nous tenons à exprimer ici notre reconnaissance du concours des pays-membres et membres associés du CDCC dans la préparation de cette publication.

EXPLANATORY NOTES

SYMBOLS

| | |
|---------------------------|---|
| | : Definitions of symbols used in the tables. |
| - | : None, in negligible quantity (less than one half of the unit indicated) or entry not applicable |
| ... | : Data not available |
| F | : FAO estimate |
| * | : Unofficial FAO estimate |
| P | : Provisional |
| r | : Revised |
| e | : ECLAC'S Office for the Caribbean estimate |
| Mt | : Metric tons |
| ha | : Hectare |
| kg | : Kilogram |
| no | : Number |
| kg/ha | : Kilogram per hectare |
| n.e.s. | : Not elsewhere specified or included |
| Crop areas | : Figures for crop areas generally refer to harvested areas |
| Production | : The production data for a particular crop is presented on the calendar-year basis |
| Yields per hectare | : Yields per hectare are computed from detailed production and area data. |

In general, the tables present a series of ten (10) individual years given in the metric system. The Gross Domestic Product (GDP) in current values has been computed from available national accounts data.

Notes on the Tables

Land use and irrigation

Data relate to available information at the end of 1983 and may represent the exact land use and irrigation activities at an earlier date. Definitions of land use categories are as follows:

1. **Total area** - refers to total area of the country, including area under inland water bodies (major rivers and lakes).

2. **Land area** - refers to total area of the country, excluding area under inland water bodies.

3. **Arable land** - refers to land under temporary crops, temporary meadows for mowing or pasture, land under market and kitchen gardens and land temporarily fallow or lying idle.

4. **Land under permanent crops** - refers to land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest.

5. **Permanent meadows and pastures** - refers to land used permanently for forage crops, cultivated or growing wild.

6. **Forests and woodlands** - refers to land under natural or planted stands of trees.

7. **Other land** - includes unused but potentially productive land, built on areas, wasteland, parks, roads and any other land not specifically listed under items 3 through 6.

Data on irrigation relate to areas purposely provided with water, whether this area is irrigated several times or only once during the year stated.

Table 9 summarizes the results of the most recent agricultural census in the Eastern Caribbean countries, Commonwealth of Bahamas, Belize and Suriname. In fact, while FAO estimates attempt to cover the whole area of the countries, the censuses only account for the areas of the holdings.

Population

Table 2 presents estimates of total population, agricultural population and economically active population, total and in agriculture.

These data are generally provided by the countries.

Data relate generally to the present-in-area (de facto) population within the present geographical boundaries.

Agricultural population is defined as all persons depending for their livelihood on agriculture.

Economically active population is defined as all persons engaged or seeking employment in an economic activity.

Economically active population in agriculture includes all economically active persons engaged principally in agriculture, forestry, hunting or fishing.

Gross Domestic Product

The high instability used in the level of exchange rates and inflationary trends in some of the member countries of the CDCC during the last decade precludes the presentation of the information on GDP in one single currency as in previous issues. Therefore, the related tables show, as up-to-date as possible, data in current national currencies. At this point, it should be mentioned that Cuba's data correspond to the 'Global Social Product' (different from the standard concept of GDP), which is the value of all goods and productive services generated in the country during the course of a year, equivalent to the sum of the values of gross production of all productive sectors. The global social product is calculated in Cuba in accordance with the 'System of Material Product' accepted by the United Nations.

CONVERSION FACTORS

Area

| | | |
|-------------------------|---|------------------------------|
| 1 Hectare (ha) | = | 2.47109 acre |
| 1 sq. kilometre (sq.km) | = | 0.38610 sq.mile |
| 1 sq. kilometre (sq.km) | = | 100 hectares (ha) |
| 1 acre | = | 0.4047 hectares (ha) |
| 1 sq.mile | = | 2.5900 sq.kilometres (sq.km) |

Weight

| | | |
|------------------------|---|-------------------------|
| 1 kilogram (kg) | = | 2.20462 pounds (lbs) |
| 1 metric ton | = | 0.98421 long tons (lt) |
| | = | 1.10231 short tons (st) |
| 1 metric quintal | = | 1,000 kilograms |
| 100 kilograms/hectares | = | 89.214 lbs per acre |
| 100 kilograms/hectares | = | 405 kgs/acre |
| 1 pound (lb) | = | 0.4536 kilogram |
| 1 long ton | = | 1.01605 metric ton |
| 1 short ton | = | 0.90718 metric ton |
| 1 long ton | = | 2,240 pounds (lbs) |
| 1 short ton | = | 2,000 pounds (lbs) |

TECHNICAL CONVERSION FACTORS¹

Citrus

Belize: 1 box oranges = 40.86 kg
1 box grapefruits = 36.32 kg

Jamaica: 1 box sweet oranges = 38.50 kg
1 box grapefruits = 31.70 kg
1 box limes = 9.10 kg
1 box tangerines = 29.50 kg

Whole milk

1 imperial gallon whole milk = 4.70 kg
1 litre whole milk = 0.21997 (imp) gallon

Eggs

Average weight of 100 hen eggs:

- Trinidad and Tobago = 5.00 kg
- Jamaica = 5.24 kg
- Suriname = 5.50 kg
- Republic of Guyana = 5.50 kg
- Other Caribbean = 5.12 kg

¹FAO

NOTES EXPLICATIVES

SIGNES

| | |
|--------------------------------|---|
| | : Les signes utilisés dans les tableaux: |
| - | : Néant, négligeable (inférieur à la moitié de l'unité indiquée), ou n'ayant pas lieu de figurer |
| ... | : Renseignement non disponible |
| F | : Estimation de la FAO |
| P | : Provisoire |
| r | : Révisé |
| e | : Estimation du bureau de la CEPAL pour les Caraïbes |
| Mt | : Tonne métrique |
| ha | : Hectare |
| kg | : Kilogramme |
| no. | : Nombre |
| kg/ha | : Kilogramme par hectare |
| n.d.a. | : Non désigné ou inclus ailleurs |
| Superficie des cultures | : Les données de superficie correspondent en général à superficie récoltées |
| Production | : Les données de production relatives à une culture se rapportent à l'année civile |
| Rendements à l'hectare | : Les rendements à l'hectare sont calculés sur la base des chiffres détaillés de superficie et de production. |

Dans leur ensemble, les tableaux offrent une série de dix (10) années différentes présentées en système métrique. Le produit intérieur brut moyen en valeur courante a été calculé à partir des données disponibles des comptabilités nationales.

NOTES CONCERNANT LES TABLEAUX

Utilisation des terres et irrigation

Les données concernant les informations disponibles à la fin de l'année 1983 représentent forcément les activités antérieures en matière d'utilisation des terres et d'irrigation. Les catégories de terres sont définies comme suit:

1. **Superficie totale** - celle du pays, y compris les eaux intérieures (principaux cours d'eau et lacs).

2. **Superficie des terres** - celle du pays moins la superficie des eaux intérieures.

3. **Terres arables** - terres affectées aux cultures temporaires, prairies temporaires à faucher ou à pâturer, jardins maraîchers ou potagers et terres en jachères temporaires ou incultes.

4. **Cultures permanentes** - terres consacrées à des cultures qui occupent le terrain pendant de longues périodes et ne doivent pas être replantées après chaque récolte.

5. **Prairies et pâturages permanents** - terres consacrées de façon permanente aux herbacées fourragères, cultivées ou sauvages.

6. **Forêts et terrains boisés** - toutes terres portant des peuplements naturels ou artificiels.

7. **Autres terres** - terres non utilisées mais potentiellement productives, terrains bâtis, terres inutilisables, parcs, routes et toutes autres terres n'entrant pas spécifiquement sous les paragraphes 3 à 6.

Les données sur l'irrigation se réfèrent aux superficies irriguées volontairement, qu'elles aient été irriguées plusieurs fois ou une seule fois dans l'année.

Le tableau 9 est un résumé de l'enquête agricole la plus récente qui ait eu lieu dans la Caraïbe orientale, Bahamas, la Belize et Suriname. En effet, alors que les estimations de la FAO cherchent à couvrir la surface totale de ce pays, les enquêtes ne portent que sur la surface des exploitations.

Population

Le tableau 2 fournit, pour la population totale, la population agricole et la population active (total et agricole).

Ces données proviennent généralement des pays.

Les statistiques se rapportent en général à la population dénombrée dans le pays ou territoire à l'intérieur des limites géographiques actuelles (de facto).

Par population agricole, on entend toutes les personnes dont l'agriculture constitue le moyen d'existence.

Par population active, on entend toutes les personnes qui se livrent à une activité économique ou cherchent un emploi.

La population agricole active comprend l'ensemble des personnes occupées économiquement et de manière principale dans l'agriculture, la foresterie, la chasse et la pêche.

Le produit intérieur brut

L'extrême instabilité observée dans le niveau des taux de change dans certains pays membres du CDCC pendant la dernière décennie ne permet pas de présenter les informations relatives au produit national brut dans une monnaie unique comme dans les éditions précédentes. En conséquence, les tableaux indiquent des données aussi à jour que possible dans les monnaies nationales courantes. Il convient de noter que les données cubaines correspondent au "produit social brut" (différent du concept standard du PIB) qui est la valeur de toutes les marchandises et services productifs créés dans le pays au cours d'une année, qui équivaut à la somme des valeurs de la production brute de tous les secteurs productifs. Le produit social global est calculé conformément à la comptabilité du produit matériel acceptée par les Nations Unies.

FACTEURS DE CONVERSION

Superficie

| | | |
|---------------------------|---|----------------------------------|
| 1 hectare (ha) | = | 2,47109 acres |
| 1 kilomètre carré (sq.km) | = | 0,28610 mille carré |
| 1 kilomètre carré (sq.km) | = | 100 hectares |
| 1 acre | = | 0,4047 hectares |
| 1 mille carré | = | 2,5900 kilomètres carrés (sq.km) |

Poids

| | | |
|-------------------------|---|---------------------------|
| 1 kilogramme (kg) | = | 2,20462 livres |
| 1 tonne métrique | = | 0,98421 longue tonne (lt) |
| | = | 1,10231 tonne courte (tc) |
| 1 quintal métrique | = | 1.000 kilogrammes |
| 100 kilogrammes/hectare | = | 89,214 lbs par acre |
| 100 kilogrammes/hectare | = | 405 kgs/acre |
| 1 livre (lb) | = | 0,4536 kilogramme |
| 1 longue tonne | = | 1,01605 tonne métrique |
| 1 tonne courte | = | 0,90718 tonne métrique |
| 1 longue tonne | = | 2.240 livres |
| 1 tonne courte | = | 2.000 livres |

CO-EFFICIENTS TECHNIQUES¹

Citrus

| | | | |
|-----------|---------------------------|---|----------|
| Bélize: | 1 caisse d'oranges | = | 40,86 kg |
| | 1 caisse de pamplemousses | = | 36,32 kg |
| Jamaïque: | 1 caisse d'oranges | = | 38,50 kg |
| | 1 caisse de pamplemousses | = | 31,70 kg |
| | 1 caisse de limes | = | 9,10 kg |
| | 1 caisse de mandarines | = | 29,50 kg |

Lait entier

| | | | |
|------------------------|---|----------------------|--|
| 1 gallon (impérial) | | | |
| de lait entier | = | 4,70 kg | |
| 1 litre de lait entier | = | 0,21997 gallon (imp) | |
| | = | 1,0339 kilogramme | |

Oeufs

Poids moyen de 100 oeufs de poule:

NOTAS EXPLICATIVAS

SIMBOLOS

| | |
|---------------------------------|--|
| - | : Los símbolos utilizados en los cuadros: |
| | : Nada, cantidad insignificante (menos de la mitad de la unidad indicada) o partida no aplicable |
| ... | : No se dispone de datos |
| F | : Estimación de la FAO |
| P | : Provisional |
| r | : Revisado |
| e | : Estimación de la Oficina de la CEPAL para el Caribe |
| Mt | : Tonelada métrica |
| ha | : Hectárea |
| kg | : Kilogramo |
| no | : Número |
| kg/ha | : Kilogramo por hectárea |
| n.e.p | : No especificado ni incluido en ninguna otra parte |
| Superficies de cultivo | : Las cifras relativas a superficies de cultivo se refieren generalmente a la superficie cosechada |
| Producción | : Las cifras relativas a producción de cultivos se basan en el año civil |
| Rendimiento por hectárea | : Los rendimientos por hectárea se han calculado a partir de los datos detallados de superficie y de producción. |

En general, los cuadros contienen series de diez (10) años individuales presentadas en el sistema métrico. El producto interno bruto en valores actuales se ha calculado a partir de los datos disponibles de las Cuentas Nacionales.

Notas sobre los cuadros

Aprovechamiento de tierras y riego

Los datos corresponden a la información disponible a finales de 1983 y tal vez no representan exactamente el aprovechamiento de tierras y las actividades de riego en una fecha anterior. Las definiciones de las categorías relativas al aprovechamiento de tierras son las siguientes:

1. **Superficie total** - se refiere a la extensión del país en su totalidad, incluyendo la superficie comprendida por las masas de agua interiores (ríos y lagos principales).

2. **Superficie terrestre** - se refiere a la extensión total de las tierras, sin incluir las aguas interiores.

3. **Tierras arables** - comprenden las tierras bajo cultivos temporales, las praderas temporales para corte o pastoreo, las tierras dedicadas a huertas comerciales o huertos y las tierras temporalmente en barbecho o no cultivadas.

4. **Tierras dedicadas a cultivos permanentes** - se refieren a las tierras dedicadas a cultivos que ocupan el terreno durante largos periodos y no necesitan ser replantados después de cada cosecha.

5. **Praderas y pastos permanentes** - se refieren al terreno utilizado permanentemente para forrajes herbáceos, ya sean cultivados o silvestres.

6. **Terrenos forestales y montes** - se refieren a las tierras con masas de árboles naturales o plantadas.

7. **Otras tierras** - comprenden las tierras no utilizadas, pero potencialmente productivas, superficies edificadas, terrenos baldíos, parques, carreteras, caminos y cualesquiera otras tierras que no se hayan incluido en los párrafos 3 a 6.

Los datos sobre riego se refieren a las superficies a las que voluntariamente se proporciona agua, independientemente de si estas superficies son regadas varias veces o solamente una vez durante el año respectivo.

Cuadro 9 resume los resultados del censo agrícola más reciente en los países del Caribe Oriental, Bahamas, Belice y Suriname. Las estimaciones de la FAD constituye un intento de reunir datos, para la superficie total de los países, mientras que los censos sólo se refieren a la superficie de las explotaciones.

Population

El **cuadro 2** presenta estimaciones de la población total, la población agrícola y la población económicamente activa, total y en la agricultura.

Por lo general, estos datos son facilitados por los países.

Los datos se refieren, en general, a la población presente (**de facto**) en las zonas respectivas, dentro de las actuales fronteras geográficas.

La población agrícola se define como todas las personas que dependen de la agricultura para su subsistencia.

La población económicamente activa se define como todas las personas dedicadas a una actividad económica o que buscan empleo en ella.

La población económicamente activa en la agricultura comprende todas las personas económicamente activas que se dedican principalmente a actividades agrícolas, forestales, venatorias o pesqueras.

Producto interno bruto

La gran inestabilidad en el nivel de las tasas de cambio y las tendencias inflacionarias observadas en algunos países miembros del CDCC durante el decenio pasado impiden la presentación de la información relativa al Producto Interno Bruto bajo una sola unidad monetaria como se hacía en ediciones anteriores. Consecuentemente, los cuadros relativos presentan, en monedas nacionales corrientes, los datos de lo más reciente posible. Se debe mencionar aquí que los datos para Cuba se refieren al 'Producto Social Global' (diferente del concepto de PIB) que es el valor de todos los bienes y servicios productivos generados en el país en el transcurso de un año y está igual a la suma del valor de la producción bruta de todos los sectores productivos. En Cuba, el producto social global se calcula según el 'Sistema de Producto Material' aceptado por las Naciones Unidas.

CO-EFICIENTES DE CONVERSION

Superficie

| | | |
