INTRODUCTION

This is the second edition of the document entitled Selected Statistical Indicators of Caribbean Countries, produced by the Economic Commission for Latin America and the Caribbean through its Subregional Headquarters for the Caribbean (ECLAC, Port of Spain). The tables presented are but a portion of the holdings of the statistical data bank and are intended to be a focus for institutions and persons wishing to access statistics on the Caribbean countries and an indication of the content of the statistical database. To ascertain whether a data element that does not appear in this document has been captured and stored, the researcher may query the database. It is the intention of ECLAC, Port of Spain to increase the coverage of statistics and countries represented in this publication over time. Indeed, several such amplifications have been made in this edition.

In preparing the tables, care was taken to utilize the most authoritative official figures available to ECLAC. Through the use of single and consistent sources of information, the possibility of publishing a table with internal conceptual inconsistencies was minimized, if not eliminated.

A number of the countries covered have made efforts to provide information on time and in a format easily understood by the researcher. To date, however, we have been unable to make a uniform presentation of tables. The plurality in the design of tables in this document derives from the differences in design of the tables at national level.

Of particular note in this volume is the use of the graph to present a more interesting description of the tabular information. Both the statistician and the researcher have become accustomed to the traditional two-dimensional graphs that reduce the analysis of data to lines. This confines the analysis in terms of graphic representation to two variables and therefore narrows the comprehension of those variables vis à vis any other. In any real world situation, several variables are at play at any given time. It would be useful for the planner to view the economy in at least three dimensions. That would present to him or her a view of a surface. Planning for the development of an economy or an economic sector can be viewed in terms of the management of a surface. Positive economics would concern itself with the understanding of the topography of that surface while the normative approach would be to evaluate its shape and seek to change it in the light of some notion of how it ought to be and how it should move over time. In

this latter case, success will be judged by the extent to which this re-design can be achieved.

The graphical representation of more variables will become possible in accordance with the availability of graphics software to achieve such a display.

Several of the graphs presented in this document have been chosen to represent the relationship between variables across categories and over time to a greater extent than the representation of magnitudes in absolute terms. For this reason, because of the viewing angle used in the design of some charts, the numbers in the scale do not appear clearly. The main intent is to display graphically the relationships between entities and to encourage the multi-faceted view of statistics where this is meaningful and more enlightening than the two-dimensional perspective.

A soft copy version of this report is available. The tables presented in soft copy have been compiled so that they can be used free of the original software environment in which they were produced. This increases the accessibility of the data to institutions and persons who do not possess the "matrix" software for running the uncompiled tables. Graphs have been prepared in a similar manner in soft copy, bringing to the researcher the visual impact of the data without the need for software overheads.

ECLAC, Port of Spain would welcome being informed of any errors noted in the data in this document, so that they may be rectified.

SOURCE: Central Bank of Aruba, and IMF estimates.

- <1> Intercompany remittances plus local oil deliveries. For 1985 includes severances payments. For 1986, intercompany remittances only.
- <2> Thirty percent of inflows from refining, excluding profit taxes (up to 1986).
- <3> Thirty-two percent of inflows from tourism (up to 1986).
- <4> Separate data for Aruba covering errors and omissions were not available until the island adopted autonomous status within the Netherlands Antilles in 1986.
- <5> Deficit(-)/surplus(+).
- <6> 1985 not strictly comparable to subsequent years.

SOURCE: Central Bank of Aruba, IMF Staff estimates.

- <1> 1985: Data not strictly comparable with subsequent years as statistics up to and including 1986 were before Aruba's Status aparte when Aruba was still a part of the Netherlands Antilles.
- <2> Current revenue for 1986, 1987, 1988 not specified due to different statistical grouping: "Other current revenue" and "capital revenue" were added together making a specification for "current revenue" not possible.
- <3> For years 1985-1988 this figure combines Income Taxes and Income Surtax.
- <4> For years 1986-1988 this figure combines Other Current Revenue and Capital Revenue.

SOURCE: Central Bank of Aruba and Bank of the Netherlands Antilles, Quarterly Bulletin.

<1> 1980-84 data include Curaçao and Bonaire.

<2> Reflects a 61.9% increase in water charges in January 1985.
 Consumer prices were fairly stable in 1986 and came up during 1987, mainly attributed to an increase in duties on Beverages, tobacco and fuel levied in January 1987.
 During 1988 consumer price increases reflected increased import prices for food, tobacco, clothing and footwear but the rise continued to be somewhat more modest than in the United States.
