Date: 12 August 1974

UNITED NATIONS
ECONOMIC COMMISSION FOR LATIN AMERICA
OFFICE FOR THE CARIBBEAN

AGRICULTURAL STATISTICS
OF THE
CARIBBEAN COUNTRIES

Assembled by
Louis L. Smith
Agricultural Economics Officer
and
Merrylle Doughty
Research Assistant

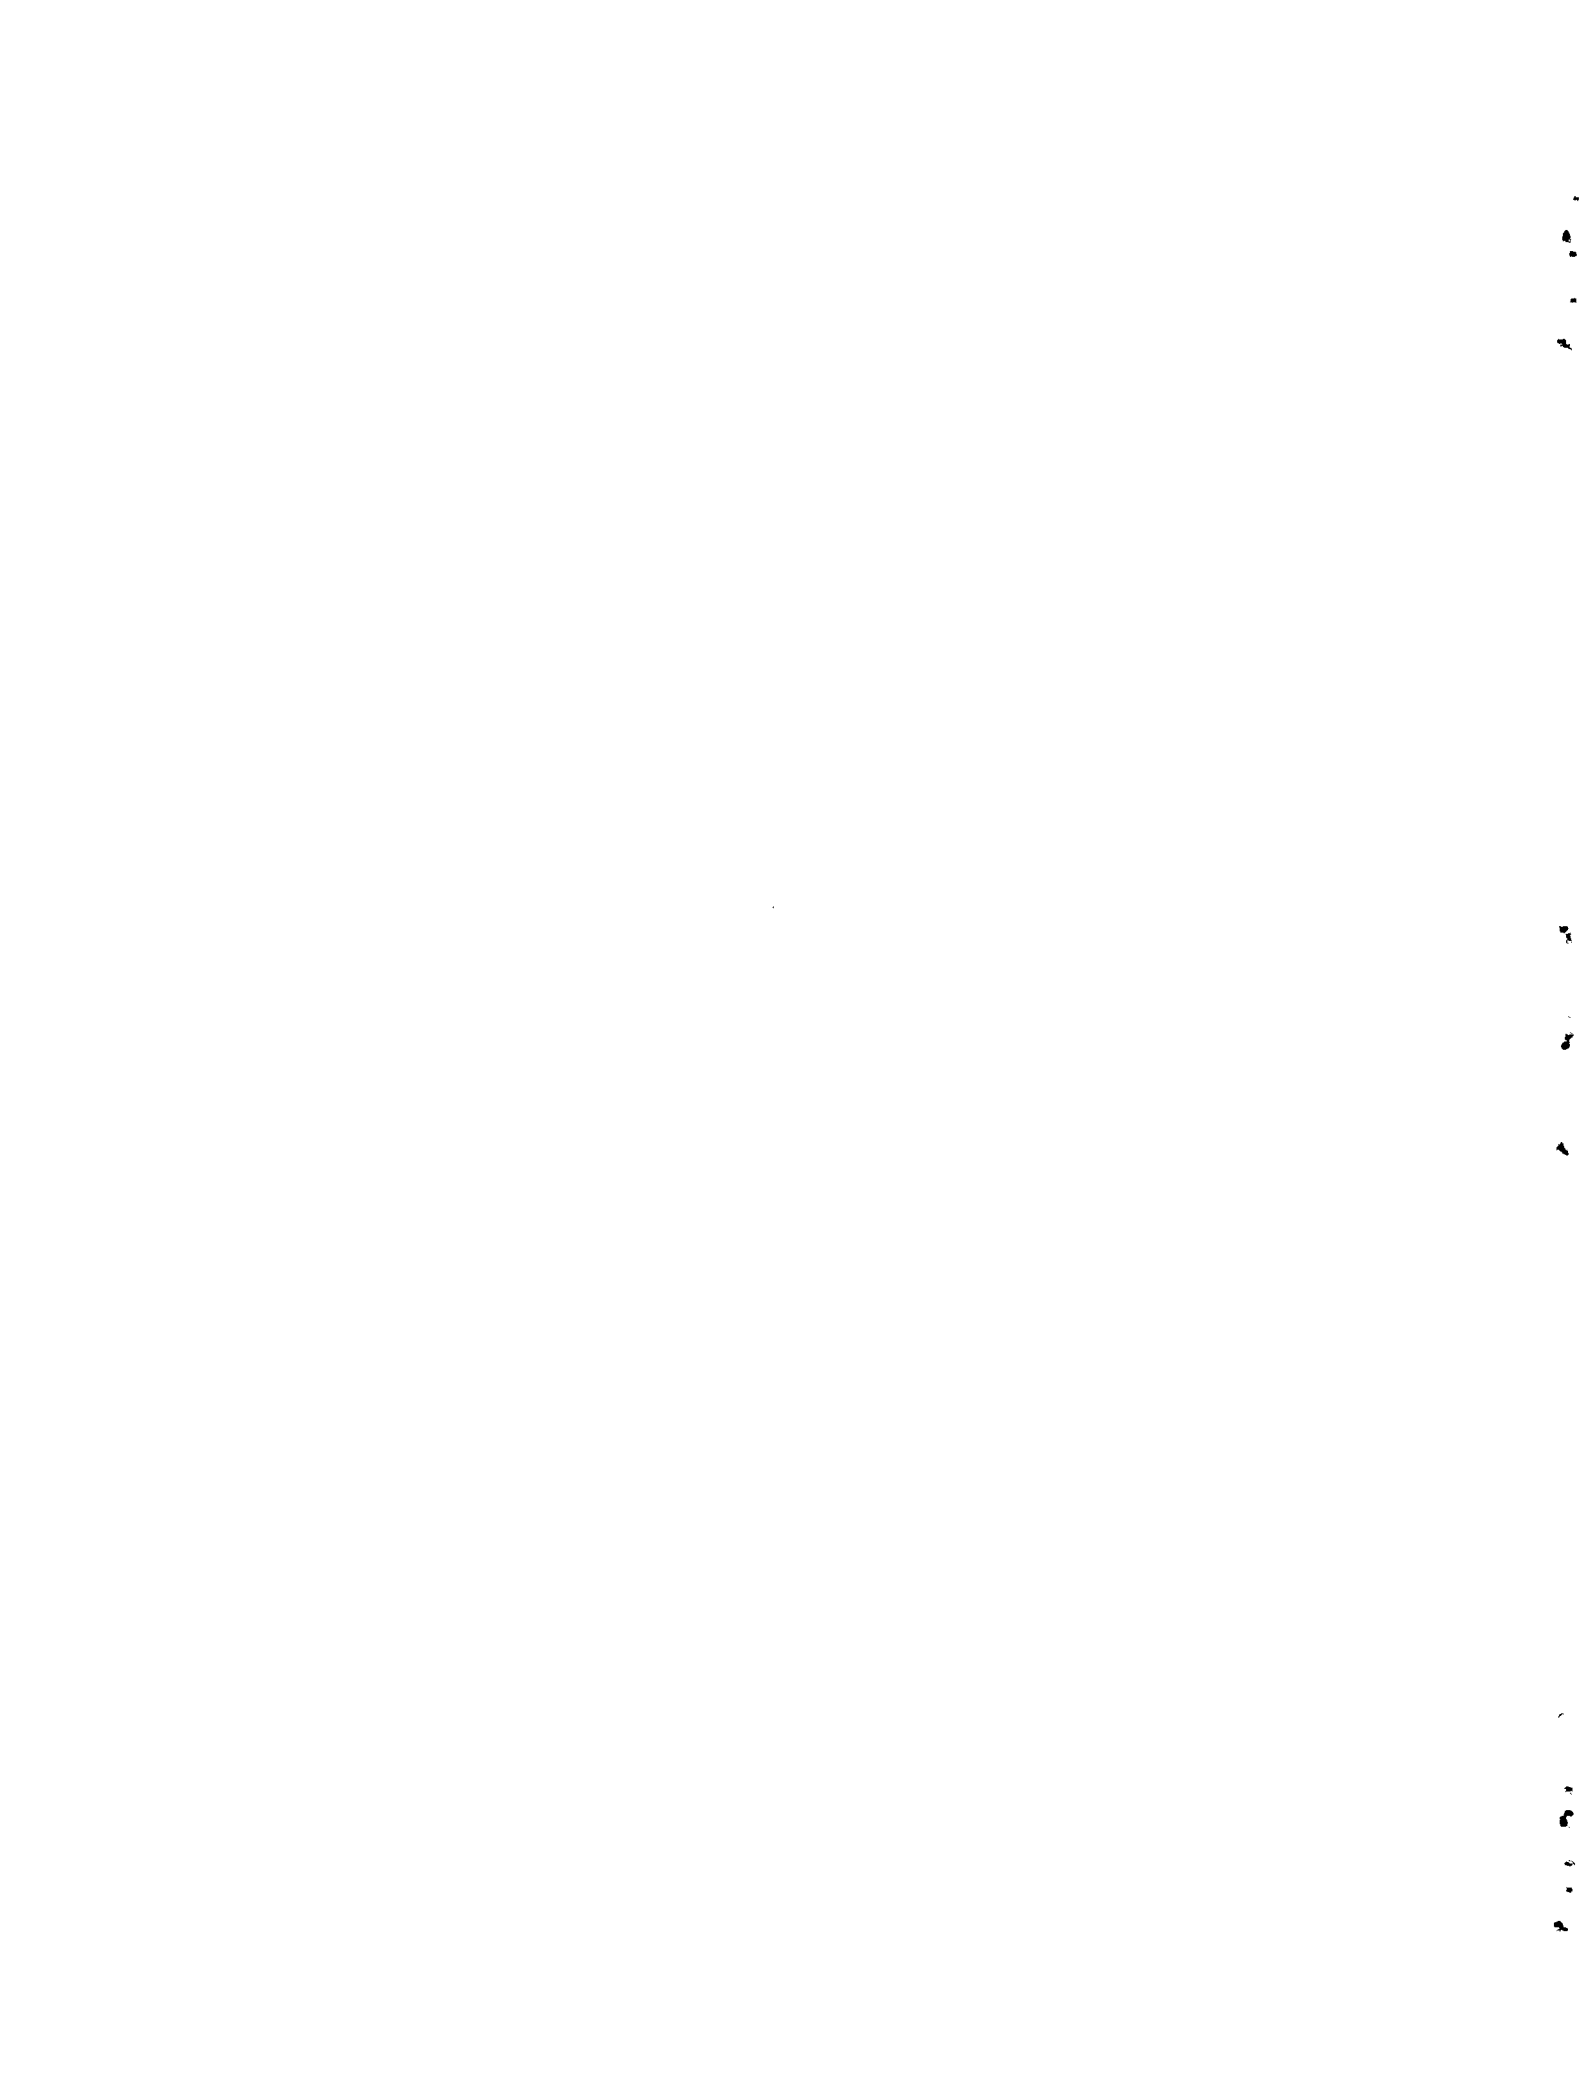

P R E F A C E

Until now there has not been a continuing effort to collate current basic agricultural statistics on the Caribbean countries. In the main, reliance has been placed on information yielded by the decennial Censuses, supplemented in some of the larger countries by periodic National Surveys of Agriculture. The adoption of policies for implementing integrated agricultural projects, has brought into sharp focus the need for fuller and more comparable information as a basis for collective action by the Governments of the area.

Consistent with the functions of assisting the Governments and stimulating the development of closer and more harmonious economic relationships in the region, the ECLA Office for the Caribbean undertook the task of collating all available information on the agriculture sector. This was done with two purposes in mind; namely, to present whatever information exists, and to identify the areas in which information is lacking. To the extent that these two purposes have been achieved, the effort would have succeeded.

S. St. A. Clarke

INTRODUCTION

The integration movement has definitely gathered momentum with the recent and complete conversion of CARIFTA into CARICOM, and also attempts at enlarging the geographical scope of the new community through association of one sort or another with other countries or territories of the Caribbean basin area. One result is that basic statistical information not only on CARICOM countries but on the Caribbean as a whole becomes even more indispensable. In this publication, which is a revised and enlarged compilation of information presented at the Ninth Conference of Agricultural Economists held in Jamaica, 3-10 April 1974, the endeavour is made to bring together in a coherent form the scattered and scarce information on the countries of the region in the field of agricultural statistics.

The available economic data on the role and contribution of agriculture to the economy of each country, and to the region as a whole, are presented. Also shown are basic information on the agrarian structures, and detailed data on production of main agricultural commodities and means of production. As is to be expected, however, the picture presented here is far from complete due to the present inadequacies of the systems of collecting and processing agricultural statistics in the region; and this is especially true for the Associated States. For this reason there are many gaps in the tables.

In assembling these data, special efforts were made to reduce the level of inaccuracy reflected in sometimes large differences between alternative sources in the same country. In addition, it was found that divergences in underlying concepts affect comparability of data from country-to-country, which to some extent limit the accuracy of regional or sub-regional aggregates. Therefore, until there is improvement in concepts and methods, and uniformity in their application throughout the region, this information is the best that can be secured. Despite these limitations, however, the tables do give a good indication of orders of magnitude in the region's agriculture.

The information relating to the basic agrarian structures refer mainly to the years around 1960, since these are the most recent years for which data are available. It is possible that there are more up-to-date data deriving from population and agricultural censuses conducted since 1968, but these are still in the processing stage and have not been published. Nevertheless, since no drastic programmes of agrarian reform have been recently implemented in the region, it is likely that the structures would have remained substantially unchanged.

II

One major deficiency in the information on the region's agriculture is in respect of prices and costs of production. Availability of this type of data would have revealed the relative degree of competitiveness between countries and between products. Perhaps some urgent action is required to initiate work in this area, particularly as a regional approach to agriculture is accorded high priority in the integration programme.

It is hoped that this publication while serving as a frame of reference for discussions, by high-lighting the deficiencies, will stimulate greater activity in the improvement of the statistical systems, especially in respect of agriculture.

III

NOTES

SYMBOLS

Definitions of symbols used in the tables:

- None, in negligible quantity (less than one half of the unit indicated) or entry not applicable.
- ... Data not available.
- F FAO estimate.

CROP AREAS

Figures for crop areas generally refer to harvested areas.

YIELDS PER HECTARE

All yields per hectare for individual countries are computed from detailed production and area data. Yields for ECCM, LDC's and MDC's are computed from the totals shown.

TOTALS

Any sub-total or total in this publication is the sum of available information. Effort has been made to obtain as complete a coverage as practicable, but there are a number of tables where, because of the paucity of information from the countries, the geographical coverage could not be completed.

CONVERSION FACTORS

Area

1 hectare	= 2.47109 acres	1 acre	= 0.40469 hectares
1 sq. kilometre	= 0.38610 sq. mile	1 sq. mile	= 2.5900 sq. kilometres
1 sq. kilometre	= 100 hectares	1 sq. mile	= 640 acres = 259 hectares

Weight

1 kilogramme	= 2.20462 pounds	1 pound	= 0.45359 kilogrammes
1 metric ton	{ = 0.98421 long tons	1 long ton	= 1.01605 metric tons
	{ = 1.10231 short tons	1 long ton	= 0.90718 metric tons
1 metric ton	= 1000 kilogrammes	1 long ton	= 2,240 pounds
1 metric quintal	= 100 kilogrammes	1 short ton	= 2000 pounds
