IMPORTACIONES CLASIFICADAS SEGUN USO O DESTINO ECONOMICO

(CUODE)

1948 - 1974

BIBLIOTECA NACIONES UNIDAS MEXICO

Las series relativas a la relación de precios del intercambio que se determinan en la División de Estadística y Análisis Cuantitativo han sido divulgadas en el Cuaderno Estadístico No 1 de la CEPAL.^{1/} La versión actualizada de ese Cuaderno Estadístico se ha publicado recientemente en el documento "América Latina: Relación de precios del intercambio, 1928-1976"(E/CEPAL/1040), el que incluye datos hasta el año 1976 y forma parte del programa regular de la Sección de Estadísticas de Comercio Exterior y Balance de Pagos.

Los datos de las importaciones, a precios corrientes y a precios constantes, han sido calculados a nivel de grupos de la Clasificación Según Uso o Destino Económico (CUODE) ^{2/} a partir del año 1948. Los valores a precios corrientes de los grupos se han obtenido para cada país clasificando en cada año los datos de los Anuarios de Comercio Exterior y otras publicaciones oficiales correspondientes. Los valores a precios constantes a su vez se han determinado deflactando los valores a precios corrientes mencionados anteriormente por índices de valor unitario calculados para una muestra de productos incluidos en cada grupo de la CUODE. El número de partidas consideradas en los distintos grupos y la participación porcentual de ellos en el total de las importaciones de cada país se presentan en el Cuadro 1.

En la aplicación de la CUODE el uso o la función económica de cada producto ha sido examinado sobre la base de la naturaleza y posición que al final del proceso de producción ocupa. Aquellos productos que tienen más de un uso han sido clasificados considerando su uso más frecuente o más probable. De acuerdo con estos criterios la clasificación según uso o destino económico es la siguiente:

^{1/} América Latina: Relación de Precios del Intercambio. Cuadernos Estadísticos de la CEPAL, No 1. Naciones Unidas 1976.

^{2/} Clasificación del Comercio Exterior según Uso o Destino Económico (CUODE). Doc. E/CN.12/739. CEPAL.

1. Los bienes de consumo comprenden los productos que están destinados para uso privado inmediato, ya sean éstos de origen primario o manufacturado. En este grupo se hacen dos subdivisiones principales:

a) Bienes no duraderos. Como regla general, estos productos tienen una duración normal inferior a un año (vestuario) o desaparecen al primer consumo (alimentos). Según el grado de elaboración los productos alimenticios se han subdividido en primarios y elaborados.

b) Bienes duraderos. Por regla general, estos productos tienen una duración normal de más de un año. Comprenden vehículos para uso particular, utensilios domésticos, muebles, máquinas y aparatos de uso doméstico, objetos de uso personal, etc.

2. Las materias primas y los productos intermedios. Comprenden los productos de origen agropecuario, minero o industrial adquiridos por las empresas para ser también transformados mediante un proceso industrial. Forman además parte de este grupo los materiales auxiliares como los fertilizantes e insecticidas para uso agrícola, pinturas, barnices, colas y materiales similares, detonadores y explosivos, envases, papel y otros materiales para envolver de limitada duración. Este grupo, de acuerdo con el sector económico a que se destinan los productos se subdivide en:

- a) Materias primas y productos intermedios para la agricultura, y
- b) Materias primas y productos intermedios para la industria (excluida la construcción).

Según el grado de elaboración, las materias primas y los productos intermedios se han subdividido en:

- i) Productos primarios. Comprenden los productos provenientes de actividades agropecuarias o mineras que se destinan posteriormente a ser transformadas mediante un proceso industrial.
- ii) Productos semielaborados. Comprenden los productos que después de un proceso de transformación son susceptibles de sufrir todavía uno o más procesos industriales en las empresas.

/iii) Productos

BIBLIOTECA NACIONES UNIDAS MEXICO

- 3 -

iii) Productos intermedios elaborados. Comprenden los productos manufacturados que al final del proceso industrial son todavía partes componentes y pueden por lo tanto dar origen a nuevos productos industriales, complementándose con otros o incorporándose como materiales auxiliares.

iv) Desechos. Comprenden los residuos y desperdicios provenientes del proceso industrial susceptibles de ser utilizados como materias primas industriales.

3. Bienes de capital. Comprenden todas las instalaciones, máquinas, equipo y herramientas que se utilizan repetidamente en el proceso de producción. Los rubros correspondientes deberían durar por lo menos un año y deberían ser para uso comercial o de las empresas públicas y no para uso de los particulares. Se incluyen en este grupo las partes y accesorios de maquinaria industrial. A diferencia de los productos intermedios elaborados y los materiales auxiliares, las partes y accesorios de maquinaria industrial no son partes componentes de los productos en fabricación y aun cuando sufran un desgaste por su uso, como las sierras y las hojas cortantes, se utilizan repetidamente en el proceso de producción y se consideran por lo tanto bienes de capital.

Siguiendo la clasificación empleada en las estadísticas de formación de capital se incluyen también en este grupo todos los bienes y materiales destinados a la industria de la construcción, los que se han subdividido según el grado de elaboración en productos primarios, productos semielaborados y productos elaborados. Igualmente se consideran bienes de capital los vehículos para uso comercial o público. Sin embargo, cabe tomar nota que en el caso de los automóviles por lo general no es posible distinguir entre los de uso particular y comercial (por ejemplo, los automóviles de alquiler y los que utilizan para su servicio las distintas empresas). Por lo tanto, todos los automóviles se clasifican en el grupo de bienes de consumo duradero.

/Los bienes

Los bienes de capital se subdividen en: a) materiales de construcción, b) bienes de capital para la agricultura, c) bienes de capital para la industria y d) equipo de transporte.

La aplicación de los criterios establecidos en esta clasificación a los datos oficiales publicados por los países cubre el período 1948 a 1974 y las series correspondientes, en dólares corrientes y a precios constantes de 1970 se presentan en los cuadros anexos con los últimos datos disponibles para cada país. Los valores totales de las importaciones llegan al año 1976 basados en cifras preliminares.
