INTRODUCCION

Este número del *Boletín Demográfico* está dedicado especialmente a presentar información relativa a la población urbana y rural de los veinte países de América Latina en el período 1970-2000. En efecto, su contenido principal lo constituyen las proyecciones de la población urbana y rural, según sexo y grupos de edades, de estos países para el período indicado. La información incluida en los diversos cuadros es la siguiente:

Cuadro 1: Se muestra aquí la población total estimada para todos los países de la región, país por país, desde 1920 hasta el año 2000. Es el mismo cuadro que aparece normalmente en todos los *Boletines* y, con la excepción de las cifras correspondientes a El Salvador, es igual al publicado en el número anterior (N° 17). La información de El Salvador proviene de una nueva estimación y proyección de la población de este país, basadas en las cifras del último censo, levantado en el año 1971.

Las cifras del período 1970-2000 corresponden en todos los casos a la proyección que implica una hipótesis de fecundidad *media* o proyección recomendada.

Cuadro 2: Presenta la población urbana y rural, por sexo y edad, estimada para cada país en el año 1970 y proyectada desde ese año hasta el 2000. Conviene aclarar, en primer lugar, que la población urbana que se ha proyectado es la que los distintos países definen como tal, definición que, como se sabe, no es igual en todos ellos. Población rural es, por exclusión, la que no reside en localidades consideradas urbanas.

En segundo término, tal vez sea conveniente mencionar que las proyecciones de la población urbana (y de su complementaria, la rural) proporcionan resultados que son sólo aproximaciones, sin duda que con un menor grado de aproximación que el que se logra en las proyecciones de la población total de un país, en razón de la cantidad y complejidad de los factores determinantes del proceso de urbanización, los que son difíciles de estimar y de evolución aún más difícil de predecir. A lo anterior hay que agregar que el método que se ha utilizado en la presente proyección de la población urbana (y rural) difiere fundamentalmente del que se emplea en las proyecciones de la población total.

En el primer caso se ha usado un método de tipo mecánico, como más adelante se describe, mientras que

el segundo implica un análisis y proyección independiente de cada uno de los componentes demográficos que determinan el crecimiento de la población, es decir de la fecundidad, mortalidad y migración internacional (método de proyección por componentes).

Es casi innecesario decir que, como en cualquier proyección, los resultados de ésta deben considerarse menos confiables a medida que las cifras se refieren a fechas más alejadas del momento inicial de la proyección.

La metodología utilizada ha consistido en proyectar las proporciones de población urbana de cada sexo y edad observadas en los distintos países hasta la fecha del último censo con información disponible, generalmente referido a algún año próximo a 1970. La proyección de estas proporciones se ha efectuado suponiendo que estos valores evolucionarán siguiendo una curva de tipo logístico. Una vez obtenidas las proporciones proyectadas hasta el año 2000, se han aplicado a la correspondiente proyección de la población total, por sexo y edad. Se determina de esta manera la población urbana, también por sexo y edad, en los años terminados en 0 y 5 del período 1970-2000 y luego, por diferencia con la población total, se determina la población rural, igualmente por sexo y edad, la que, junto con la urbana, aparece en este cuadro.

Cuadro 3: Para los países, y las subregiones formadas por éstos, se presenta en este cuadro la población total (de ambos sexos y de todas las edades) correspondiente a la zona *urbana, rural y total* de ambas zonas, para el período 1970-2000. Adicionalmente se incluye la proporción que representa la población urbana con respecto a la total del país. Las cifras de la población urbana y rural provienen de las estimaciones y proyecciones anotadas en el cuadro 2 y la población total de estimaciones análogas publicadas en *Boletines* anteriores.

Cuadro 4: En este cuadro se presenta la composición por grandes grupos de edades de la población de América Latina, por países y subregiones, según se observaba alrededor de 1970 y de acuerdo a lo previsto en las proyecciones para el año 2000. Las cifras se refieren a ambos sexos y a la población *urbana, rural y total*.

Cuadro 5: Aparecen aquí las tasas anuales medias de crecimiento de América Latina, según países y sub-

regiones, de acuerdo a los resultados de las respectivas proyecciones de la población *urbana, rural y total*. Los valores se dan por quinquenios, cubriendo el período 1970-2000. Esta información se deriva de las cifras que aparecen en el cuadro 3.

Cuadro 6: Contiene este cuadro los índices de masculinidad por edad, es decir el número de hombres por cada 100 mujeres, en cada grupo de edades, que se observa en la población *urbana, rural y total*, según las respectivas estimaciones y proyecciones, en los años 1970 y 2000. Las cifras se refieren al total de la región, a los países individualmente y a las subregiones.

Cuadro 7: Este cuadro muestra la relación que existe entre la población en edades inactivas (personas menores de 15 años y de 65 años y más) y la población en edades activas (entre 15 y 64 años de edad). El valor de este índice, que se denomina relación de dependencia, está determinado exclusivamente por la composición por edad de la respectiva población, en este caso la *urbana, rural y total* de cada país en los años 1970 y 2000.

Como en el caso del cuadro 1, la población total de cada país que se ha considerado en los cuadros 3 al 7,

corresponde a la respectiva proyección con hipótesis de fecundidad media o proyección recomendada.

Cuadro 8: Incluye la esperanza de vida al nacer que corresponde a la mortalidad estimada para la población de cada país en el período 1950-2000 (sin distinción de área urbana y rural, ya que no se dispone de este dato). La información se presenta para cada sexo separadamente y para el conjunto de ambos sexos, por períodos quinquenales. Estas cifras provienen de las estimaciones y proyecciones de la población total cuyos resultados han sido publicados en forma detallada en diversos números anteriores de estos *Boletines*, en los cuales, no obstante, sólo se había presentado la esperanza de vida de ambos sexos.

Cabe advertir, finalmente, que las proyecciones de la población *total*, de varios de los países que aparecen en los cuadros anteriores tienen aún el carácter de provisionales, es decir están sujetas a eventuales revisiones. Los cambios que se originen en dichas revisiones repercutirán, lógicamente, en las respectivas proyecciones de la población urbana y rural que ahora se presentan para esos países (véanse las *Notas Explicativas*).

INTRODUCTION

This issue of the *Demographic Bulletin* is specially devoted to present data relative to the urban and rural population from the twenty Latin American countries for the period 1970-2000. In fact, its main contents are projections for urban and rural population, by sex and age-groups for the countries and period mentioned above. The following is the information contained in the Tables: *Table 1*: Total population, estimated for every country of the region, from 1920 up to 2000 is presented in this Table. This is the same table regularly appearing in the *Bulletin* and with the exception of the figures for El Salvador, it is exactly alike to the one appearing in *Bulletin* N° 17. The information for El Salvador is derived from a new population estimate and projection based on data from the latest census taken in 1971.

In every case, figures for the period 1970-2000 correspond to a projection implying a medium fertility hypothesis, or recommended projection.

Table 2: This Table presents urban and rural population, by sex and age, estimated for each country in 1970 and projected from that year up to 2000. It is necessary to state, in the first place, that the projected urban population is the one defined as such by each country, and it is a known fact that this definition is not the same in all the countries concerned. Therefore, rural population is, by exclusion, the one not living in areas considered as urban.

Secondly, it might be convenient to warn the reader that the urban population projections (and its matching rural projection) only give approximate results and doubtless, with a lesser degree of accuracy than the one reached at with the total population projection for a given country. This is due to the great amount and complexity of factors determining the urbanization process, which are difficult to estimate and even more difficult to forecast in their evolution. Besides, it is necessary to say that the method used in elaborating this urban (and rural) population projection is radically different from the one used to prepare the total population projections.

As described below, in the first case a mechanical-type method has been used, while the second one requires an independent analysis and projection of each of the demographic factors which condition population growth, that is

to say, fertility, mortality and international migration (component projection method). It is unnecessary to insist upon the fact that, as far as any projection is concerned, the results of the present one should be considered less reliable as the figures refer to dates which are more distant from the initial date of the projection.

The methodology used was, in fact, to project the urban population proportions of each age-group and sex, observed in the different countries up to the data of the latest census for which there is information available, generally referring to some year next to 1970. The projection for these proportions has been made taking for granted that the evolution of these values will follow a logistic shape curve. Once the projected proportions, up to 2000, were obtained they were applied to the corresponding total population projection, by sex and age. Urban population, by sex and age, is determined in this way for years ended in 0 and 5 for the period 1970-2000. Then the difference with total population gives the rural population by sex and age. Both populations are presented in this Table.

Table 3: Total population (both sexes and all ages) for *urban* and *rural* areas, and *total* for both areas is presented here, by countries and sub-regions formed by them. The 1970-2000 period is covered. Besides the proportion representing urban population with respect to the total population of the country is included. Urban and rural population figures are derived from estimates and projections shown in Table 2, and total population is derived from similar estimates published in former *Bulletins*.

Table 4: The Latin American age-structure is presented here in broad age-groups, by countries and sub-regions as it was about 1970 and according to projections made for 2000. Figures are given for both sexes, and for *urban*, *rural* and *total* population.

Table 5: The mean annual growth rates for Latin American population are presented here, by countries and sub-regions, according to the results of the respective *urban*, *rural* and *total* population projections. The values are given in quinquennial periods covering the period 1970-2000. This information is derived from figures appearing in Table 3.

Table 6: Masculinity ratios, by age, are shown in this

Table. This is the number of males for every 100 females within each age-group observed in the *urban*, *rural* and *total* population according to the respective estimates and projections for 1970 and 2000. Figures are given for the whole region, individual countries, and sub-regions. *Table 7*: This Table shows the ratio of the inactive-age population (under 15 and 65 and over) to the economically active-age population (between 15 and 64 years old). The value of this index, called dependancy ratio is given solely by the age-structure of the respective population, the *urban*, *rural* and *total* population in each country for the years 1970 and 2000.

The same as in Table 1, total population considered in Tables 3 to 7 for each country corresponds to the respective projection with medium fertility hypothesis, or recommended projection.

Table 8: Life expectancy at birth is shown in this Table, and corresponds to population mortality estimates in each country for the period 1950-2000 (distinction of *urban* from *rural* area is not made since these data are not available). The information is presented by sex, total for both sexes, and by quinquennial periods. These figures are derived from total population estimates and projections whose results have been published in former issues of the *Bulletin*. Nevertheless, life expectancy had been presented for both sexes only.

A final warning should be made: total population projections for several countries have a provisional character, and eventually they must be subjected to revision. Changes made through those revisions will obviously affect the respective urban and rural population projections now being presented. (Refer to *Explanatory Notes*).

NOTAS EXPLICATIVAS

CUADRO 1: Las cifras del período 1920-1940 fueron derivadas de estimaciones que aparecen en las siguientes publicaciones:

- a) Naciones Unidas, *Demographic Yearbook*, Department of Economics and Social Affairs, Nueva York, 1952 y 1960.
- b) Naciones Unidas, "Perspectivas de la población mundial evaluadas en 1963", en *Estudios Demográficos* N° 41, ST/SOA/Serie A/41, Nueva York, 1967.

Los datos de población de los veinte países de América Latina en el período 1950-2000 proceden de proyecciones elaboradas recientemente en CELADE.

En la preparación de algunas de ellas se ha contado con la colaboración de instituciones nacionales, como sigue:

Argentina: El Instituto Nacional de Estadística y Censos (INDEC) tuvo a su cargo la elaboración y formulación de las hipótesis acerca de la futura evolución de las variables demográficas que se necesitan para la proyección. El informe que contiene los resultados y la metodología utilizada fue publicado por INDEC, bajo el título de *Evolución de la población argentina, 1950-2000*, Instituto Nacional de Estadística y Censos, Buenos Aires, mayo de 1974.

Brasil: La proyección se llevó a cabo en consulta con el Instituto Brasileiro de Geografía e Estatística (IBGE). El informe correspondiente se encuentra elaborado en CELADE.

Chile: La proyección fue elaborada en colaboración con la Oficina de Planificación Nacional (ODEPLAN) y con el Instituto Nacional de Estadística (INE). Los resultados aparecen publicados en: *Proyección de la población de Chile por sexo y grupos quinquenales de edad, 1950-2000*, República de Chile, Junta de Gobierno, Oficina de Planificación Nacional, Santiago, mayo de 1975.

El Salvador: Elaborada en colaboración con las instituciones nacionales que se mencionan enseguida, sus resultados aparecen en la publicación *La población de El Salvador por sexo y edad en el período 1950-2000. Principales indicadores demográficos*, República de El Salvador, Consejo Nacional de Planificación y Coordinación Económica (CONAPLAN), Dirección General de Estadística y Censos (DIGESTIC), San Salvador, El Salvador, 1976. (Edición provisional).

México: En la preparación de esta proyección participaron, además de CELADE, El Colegio de México, la Dirección General de Estadística y Censos, y la Universidad Autónoma de México.

Panamá: Esta proyección se elaboró en colaboración con la Dirección de Estadística y Censo de Panamá, la que asumió la responsabilidad de determinar los niveles iniciales y la evolución futura de las variables demo-

gráficas fundamentales. Se publicó en "Proyección de la población total de la República de Panamá, por sexo y grupos de edades, 1960-2000", en *Estadística Panameña*, año XXXIII, suplemento, Dirección de Estadística y Censo, 1974.

Paraguay: Se efectuó esta proyección en colaboración con la Oficina Técnica de Planificación de ese país, y sus resultados se publicaron con el título de *Proyecciones de la población por sexo y grupos de edad, 1950-2000*, Presidencia de la República, Secretaría Técnica de Planificación, División de Programación Social, Sector Población y Recursos Humanos, diciembre de 1974.

Perú: La proyección se preparó en colaboración con la Oficina Nacional de Estadística y Censos (ONEC) del Perú. Un informe sobre ella será publicado por el Instituto Nacional de Estadística del Perú (INE) que corresponde a la ex ONEC.

Las proyecciones de los restantes doce países de América Latina se elaboraron en CELADE, sin la participación directa de organismos nacionales de estos países. De estos trabajos se encuentran ya publicados los siguientes:

República Dominicana: *Estudio de la evolución demográfica en el período 1950-1970 y proyecciones de la población 1970-2000*, de A. García, CELADE, Serie AS, N° 19, San José, Costa Rica, 1973.

Guatemala: *Guatemala: Evaluación del censo de 1973 y proyección de la población por sexo y edad, 1950-2000*, de J. Chackiel, CELADE, Serie A, N° 102, San José, Costa Rica, 1976.

Con respecto a los otros países y territorios de la región, la información proviene o ha sido calculada a partir de proyecciones de población elaboradas recientemente por la División de Población de las Naciones Unidas.

Las cifras de población de los años calendario 1971 a 1974 y 1976 a 1979 que se presentan en este cuadro, se obtuvieron por interpolación de los valores que para los años terminados en 0 y 5 aparecen en las proyecciones anteriormente citadas.

La población del período 1970-2000 corresponde a la proyección con hipótesis de fecundidad media, o recomendada, de cada país.

De las proyecciones anotadas, pueden considerarse como definitivas las correspondientes a la *Argentina*, el *Brasil*, *Cuba*, *Chile*, *Guatemala*, *México*, *Nicaragua*, *Panamá*, el *Paraguay*, el *Perú*, la *República Dominicana*, *El Salvador*, *Haití* y *Venezuela*. Las restantes mantienen su carácter de estimaciones y proyecciones provisionarias, hasta que lleguen a su término las revisiones de sus resultados, que actualmente se están efectuando en CELADE, con base en información proveniente de los censos de población levantados en estos países alrededor de 1970 (con excepción de Bolivia).

CUADRO 2: Las cifras de este cuadro, población urbana y rural según sexo y edad, 1970-2000, provienen en su totalidad de estimaciones y proyecciones elaboradas en CELADE para cada país. La metodología, someramente descrita en la Introducción, se aplicó uniformemente en todas ellas, con la excepción de Chile, en cuya proyección se siguieron métodos diferentes (se efectuó la proyección por regiones del país). Debe entenderse que las proyecciones urbano-rurales de los países cuyas proyecciones de la población total son provisorias, tienen también este carácter.

CUADROS 3 al 8: Todos estos cuadros se derivan de las estimaciones y proyecciones de la población total, mencionadas como fuentes del cuadro 1, y/o de las estimaciones y proyecciones de la población urbana y rural, que se incluyen en el cuadro 2 de este *Boletín*. Estas cifras comparten, en consecuencia, el carácter defi-

nitivo o provisorio que tienen aquellas, según se ha anotado en la Introducción.

La población urbana que aparece en el cuadro 3 (también en el 2) corresponde a la definida como tal en los diferentes países, por lo que en muchos casos las cifras deben compararse con precaución, ya que no existe uniformidad en dicha definición.

Las tasas de crecimiento que aparecen en el cuadro 5 corresponden a la implícita en la fórmula $P_t = P_0(1+r)^t$ donde P_0 y P_t representan la población inicial y final de cada quinquenio; t el intervalo de tiempo (en este caso 5 años), y r la tasa de crecimiento.

El cuadro 8 se ha incluido en el presente *Boletín* principalmente porque en los números anteriores no se había dado a conocer la esperanza de vida de cada sexo como ahora, sino que solamente la de ambos sexos.

EXPLANATORY NOTES

TABLE 1: Figures for the period 1920-1940 were derived from estimates appearing in the following publications:

- a) United Nations, *Demographic Yearbook*, Department of Economic and Social Affairs, New York, 1952 and 1960.
- b) United Nations, "Perspectivas de la población mundial evaluadas en 1963", in *Estudios Demográficos* N° 41, ST/SOA/Series A/41, New York, 1967.

Population data for the period 1950-2000 for the twenty Latin American countries are drawn from the projections recently elaborated by CELADE.

Some of the projections were prepared in collaboration with national institutions, as follows:

Argentina: The Instituto Nacional de Estadística y Censos (INDEC) was in charge of elaborating and putting forward the hypotheses about the future evolution of the demographic variables necessary for the projection. The report containing the results and the methodology used was published by INDEC under the title *Evolución de la población argentina, 1950-2000*, Instituto Nacional de Estadística y Censos, Buenos Aires, May, 1974.

Brazil: The projection was developed in consultation with the Instituto Brasileiro de Geografia e Estatística (IBGE). The report has already been elaborated by CELADE.

Chile: The projection was elaborated in collaboration with the Oficina de Planificación Nacional (ODEPLAN) and the Instituto Nacional de Estadística (INE). The results were published in *Proyección de la población de Chile por sexo y grupos quinquenales de edad, 1950-2000*, República de Chile, Junta de Gobierno, Oficina de Planificación Nacional, Santiago, May, 1975.

El Salvador: The projection was elaborated in collaboration with the national institutions mentioned below and the results appear in the publication *La población de El Salvador por sexo y edad en el período 1950-2000. Principales indicadores demográficos*, República de El Salvador, Consejo Nacional de Planificación y Coordinación Económica (CONAPLAN), Dirección General de Estadística y Censos (DIGESTIC), San Salvador, El Salvador, 1976. (Provisional edition).

Mexico: This projection was jointly prepared by CELADE, El Colegio de México, Dirección General de Estadística y Censos, and the Universidad Autónoma de México.

Panama: This projection was elaborated in collaboration with the Dirección de Estadística y Censo which took the responsibility of establishing the initial levels and the future evolution of the basic demographic variables. It was published in "Proyección

de la población total de la República de Panamá, por sexo y grupos de edades, 1960-2000", in *Estadística Panameña*, año XXXIII, suplemento, Dirección de Estadística y Censo, 1974.

Paraguay: This projection was elaborated in collaboration with the Oficina Técnica de Planificación of that country. The results were published under the title *Proyecciones de la población por sexo y grupos de edad, 1950-2000*, Presidencia de la República, Secretaría Técnica de Planificación, División de Programación Social, Sector Población y Recursos Humanos, December, 1974.

Peru: The projection was prepared in collaboration with the Oficina Nacional de Estadística y Censos (ONEC) of this country. The Instituto Nacional de Estadística del Perú (INE), former ONEC, will publish a report about this projection.

Projections for the other twelve Latin American countries were elaborated by CELADE without direct participation of national institutions from these countries. The following studies are already published:

Dominican Republic: *Estudio de la evolución demográfica en el período 1950-1970 y proyecciones de la población 1970-2000*, by A. García, CELADE, Series AS, N° 19, San José, Costa Rica, 1973.

Guatemala: *Guatemala: Evaluación del Censo de 1973, y proyección de la población por sexo y edad, 1950-2000*, by J. Chackiel, CELADE, Series A, N° 102, San José, Costa Rica, 1976.

Regarding the other countries and territories of the region, data have been derived or calculated from population projections recently elaborated by the United Nations Population Division.

Population figures for the calendar years 1971-1974 and 1976-1979 presented in this Table were obtained by interpolating the values corresponding to years ended in digits 0 and 5 appearing in the projections mentioned above.

Population for the period 1970-2000 corresponds to the projection with medium fertility hypothesis, or recommended projection for each country. The projections corresponding to the following countries can be considered as final: *Argentina, Brazil, Cuba, Chile, Dominican Republic, Guatemala, Mexico, Nicaragua, Paraguay, Panama, Peru, El Salvador, Haiti and Venezuela*. The rest of the projections and estimates still keep their provisional character until the revision of their results be finished. At present, this revision is being made at CELADE based on data from population censuses taken in these countries, except Bolivia, around 1970.

Table 2: Figures for this Table -urban and rural population by sex and age, 1970-2000- are entirely derived from estimates and projections elaborated for each country at CELADE. The methodology, briefly explained in the Introduction, was uniformly applied for all the projections, with the exception of Chile. In this

case, different methods were used (projections were made by regions).

It should be born in mind that urban-rural projections have a provisional character where the country total population projection has the same character.

Tables 3 to 8: All these Tables are derived from the total population estimates and projections mentioned as sources for Table 1, and/or from urban and rural population estimates and projections included in Table 2 of this issue. Therefore, these figures have the same character (final or provisional) as the former, as mentioned in the Introduction.

Urban population appearing in Table 3 (and 2) corresponds to the one defined as such by each country. Therefore, figures must be cautiously compared because of the lacking of an unique definition.

Growth rates appearing in Table 5 correspond to the one implicit in the formula $P_t = P_0(1 + r)^t$ where P_0 and P_t are the initial and final population in each quinquennium, t the interval (5 years in this case), and r the growth rate.

Table 8 has been included mainly because in former *Bulletins* only life expectancy for both sexes had been published instead of life expectancy for each sex as in the present *Bulletin*.

Impreso en los Servicios de
Reproducción de CELADE.
