PRESENTACIÓN

Las estimaciones y proyecciones de población de los 20 países de América Latina publicadas en el Boletín Demográfico No. 59 de enero de 1997 se generaron en base al denominado Método de Componentes, el que utiliza las distintas variables que intervienen en la dinámica demográfica: fecundidad, mortalidad y migración. En consecuencia, en el caso de la mortalidad, para los veinte países de América Latina se han construido tablas de mortalidad para los períodos quinquenales que cubren las estimaciones y proyecciones.

El presente Boletín Demográfico tiene por objeto presentar las Tablas Abreviadas de Mortalidad por sexo de los veinte países de América Latina, correspondientes al período 1950-2025. En esta ocasión se actualiza el contenido del Boletín No. 53 de enero de 1994. El CELADE dispone, además, de proyecciones de población, y consecuentemente, de tablas de mortalidad para el período 2025-2050.

En general, en la mayoría de los países de América Latina se dispone de información para hacer estimaciones de la mortalidad del período 1950-1995 en base a los censos, encuestas y estadísticas vitales. El procedimiento de estimación clásico se basa en el cálculo de las tasas de mortalidad por sexo y edad con las defunciones provenientes de las estadísticas vitales, y la población censal. Sin embargo, sólo en algunos países las estadísticas vitales son registradas adecuadamente - afectadas muchas veces por un considerable subregistro e inscripciones tardías, y los censos en general no se han realizado con la regularidad necesaria de acuerdo a las recomendaciones de los organismos internacionales. Por las razones expuestas, las encuestas y las estimaciones provenientes de la utilización de los denominados "métodos indirectos" han sido una alternativa importante para el análisis y estimación no solo de la mortalidad sino también de la fecundidad y de la migración internacional.

La metodología para elaborar proyecciones de mortalidad se basa, principalmente, en la mantención de las tendencias observadas y en la adopción de tablas de mortalidad límites tomadas, fundamentalmente, de experiencias observadas en países con baja mortalidad. Mayores detalles sobre los aspectos metodológicos pueden ser vistos en *Métodos para proyecciones demográficas*, CELADE 1984 (Serie E, No. 1003).

Un resumen de la información que refleja los niveles de mortalidad, se presenta en las tablas 1 y 2. En ellas se agrupan los países según los niveles de esperanza de vida al nacer y mortalidad infantil que tenían en los períodos 1950-1955 y 1990-1995 y los que se esperan para el período de 2020-2025. Pueden observarse altos niveles de mortalidad en la mayoría de los países de América Latina en la década de 1950; 13 países con esperanza de vida al nacer inferior a 55 años y 14 países con mortalidad infantil superior a 100 muertes de menores de un año por cada mil nacidos vivos, correspondiendo a un 72% y 82% de la población total respectivamente. Entre los períodos 1950-1955 y 1990-1995 ambos indicadores han cambiado significativamente: ningún país de América Latina tiene una esperanza de vida al nacer inferior a 55 años y sólo Bolivia y Haití tienen una tasa de mortalidad infantil superior a 75 por mil, correspondiendo a un 4% de la población total.

La comparación de los niveles actuales de mortalidad de la mayoría de los países de América Latina con los de los países más desarrollados ilustra que los avances para postergar y evitar muertes en la región, están lejos de los alcanzados por los países desarrollados. Según el *World Population Prospects* de 1996 de Naciones Unidas, los países más desarrollados alcanzan valores de esperanzas de vida al nacer de 74.2 años, para ambos

sexos y una tasa de mortalidad infantil de 11 muertes de menores de un año por cada mil nacidos vivos para el período 1990-1995, contra una esperanza de vida al nacer de 68.4 años y una mortalidad infantil de 40 por mil en promedio para los países latino americanos.

América Latina sería la región en desarrollo con más baja mortalidad sin embargo, existen grandes desigualdades entre países. Por un lado Chile, Costa Rica y Cuba tienen una esperanza de vida al nacer de alrededor de 75 años, superior al promedio de los países más desarrollados, y, en el otro extremo Haití no alcanzaría a los 60 y Bolivia apenas lo superaría. Del punto de vista de la meta de 70 años, fijada por la Organización Mundial de la Salud para el final de este siglo y para el año 2005 por la Conferencia Internacional sobre la Población y Desarrollo de 1994, realizada en el Cairo, de los veinte países de la región, en la actualidad, la mitad de los países ya lo habría logrado y, de acuerdo a las proyecciones, solamente tres países no lo alcanzarían.

Al observar los indicadores de mortalidad por sexo se observa, en términos generales que las mujeres se ven favorecidas por un mayor promedio de vida que los hombres (cuadro 5). Sin embargo, la magnitud de las diferencias de la esperanza de vida al nacimiento por sexo y sus variaciones son heterogéneas entre países. Por ejemplo, Argentina tiene la mayor diferencia entre las esperanzas de vida al nacimiento de mujeres y hombres (7.1 años), mientras Cuba tiene la menor de ese valor. En general la tendencia del diferencial por sexo ha sido a aumentar la ventaja en favor del sexo femenino, desde aproximadamente 2,5 años para una esperanza de vida al nacer de 60, hasta 6 años cuando se supera el valor 70 de dicho indicador. Sin embargo, en los casos de Chile, México, Uruguay y Venezuela, las ganancias comienzan a ser mayores en hombres, lo que podría ser el inicio de una disminución o estabilización de las diferencias.

La baja de la mortalidad, expresada por el aumento en la esperanza de vida al nacer, se debe principalmente a los logros en reducir la mortalidad en edades tempranas, particularmente la mortalidad infantil (cuadro 6). El análisis por sexo muestra que sistemáticamente las mujeres tienen un riesgo relativo de morir en la niñez inferior a los hombres, y que las ganancias superiores en la esperanza de vida al nacer las han logrado con mayores reducciones en la mortalidad al comienzo de la vida.

En cuanto a las proyecciones de la mortalidad, se observa que para el período 2020-2025 casi todos los países, con excepción de Haití, alcanzarían una esperanza de vida al nacer superior a los 70 años y, en relación a las tasas de mortalidad infantil, inferior a 25 por mil, en este caso las excepciones son Bolivia, Guatemala y Haití. Además se espera que solamente a partir del período 2035-2040 América Latina estaría alcanzando los niveles actuales de esperanza de vida y tasas de mortalidad infantil de los países más desarrollados.

PRESENTATION

The population estimates and projections for the 20 countries of Latin America published in Demographic Bulletin No.59 of January 1997 were obtained using the component method, which applies different variables that enter into the demographic dynamic: fertility, mortality and migration. Life tables have thus been prepared for the 20 countries of Latin America for the five-year periods covered by these estimates and projections.

This issue of the Demographic Bulletin presents abridged life tables by sex for the 20 countries of Latin America for the period 1950-2025. It provides an up-date on the tables contained in Bulletin No. 53 of January 1994. Furthermore, CELADE also has available population projections, and therefore life tables, for the 2025-2050 period.

In general, in most countries of Latin America, mortality estimates for the period 1950-1995 are based on information drawn from censuses, surveys and vital statistics. The standard procedure is to use death statistics obtained from vital statistics and population censuses to calculate mortality rates by sex and age. However, vital statistics are properly recorded in only a few countries: there is often considerable under-registration and late registration, and censuses have generally not been conducted as regularly as recommended by international organizations. Hence, surveys and estimates obtained using "indirect methods", have been an important alternative for analyzing and computing not only mortality but also fertility and international migration.

Mortality projections are derived, primarily, from the extension of observed trends and the adoption of target life tables based, essentially, on finding for countries with low mortality rates. Further details on methodological approaches may be found in *Métodos para proyecciones demográficas*, CELADE 1984 (Serie E, No.1003).

Information concerning the mortality levels is set out in summary form in tables 1 and 2, which group countries according to life expectancy at birth and infant mortality levels for the periods 1950-1955 and 1990-1995 and those projected for the period 2020-2025. Mortality rates were high in most countries of Latin America in the 1950s; in 13 countries, accounting for 72% of the total population, life expectancy at birth was less than 55 years, and in 14 countries, accounting 82% of the total population, infant mortality was above 100 per thousand live births. Between the periods 1950-1955 and 1990-1995, both indicators had changed significantly: no country in Latin America now has a life expectancy at birth that is below 55 years and only Bolivia and Haiti, accounting for 4% of the total population, have infant mortality rates above 75 per thousand.

A comparison of present mortality levels in most Latin American countries with those of the most developed countries reveals that progress made in the region towards postponing and avoiding deaths is far below that achieved by those countries. According to the 1996 issue of the United Nations publication, *World Population Prospects*, life expectancy at birth in the most developed countries for the period 1990-95 was 74.2 years for both sexes and the infant mortality rate was 11 deaths under one year of age per thousand live births, compared with a life expectancy at birth of 68.4 years and infant mortality rate of 40 per thousand in Latin American countries.

While Latin America is estimated to be the region of the developing world with the lowest mortality, there are huge disparities between countries. On the one hand, life expectancy at birth in Chile, Costa Rica and Cuba is around 75 years, above the average for

the most developed countries, while, Haiti, at the other extreme, is estimated to have a rate of less than 60 and Bolivia to have a rate that is scarcely higher. Half of the 20 countries of the region already achieved the target of 70 years set for the end of this century by the World Health Organization and for the year 2005 by the International Conference on Population and Development, held in Cairo in 1994, and, according to the projections, only three of the countries are expected to fall short of this goal.

Mortality indicators by sex reveal that, in general, women have a higher average life expectancy than men (table 5). However, dissimilarities in the differences in life expectancy at birth between sexes it's variations exist between countries. For example, Argentina shows the greatest differences between life expectancy at birth for women and men (7.1 years), while the difference in Cuba is half that value. In general, the trend in the sex differential has shown an increase in favor of women, from around 2.5 years for a life expectancy at birth of 60 years to 6 years when the indicator exceeds 70. However, in Chile, Mexico, Uruguay and Venezuela, men's gains in life expectancy are found to be higher than women's. This could be the beginning of a decrease, or at least a stabilization, of the gap between sexes.

The decrease in mortality, expressed by the increase of the life expectancy at birth, is mainly the result of achievements in reducing early mortality, particularly infant mortality (table 6). The breakdown for each sex shows that the risk of dying during childhood is systematically lower for females than for males and that the most significant gains in terms of life expectancy at birth have been achieved through greater reductions in mortality at the start of life. The trend over time shows that as mortality increase, so do the sex differentials in infant mortality rates and life expectancy at birth.

With respect to mortality projections for the period 2020-2025, almost all countries, with the exception of Haiti, are expected to attain a life expectancy at birth of over 70 years and infant mortality rates are expected to be below 25 per thousand, the exceptions in the latter case being Bolivia, Guatemala and Haiti. However, Latin America is nor expected to achieve the present life expectancy and infant mortality rates of the most developed countries until the period 2035-2040.

DEFINICIONES DE ALGUNAS FUNCIONES DE LA TABLA DE MORTALIDAD

Sobrevivientes de edad x , $l(x)$.

Es el número de personas que, de acuerdo con la Tabla de Mortalidad, a partir de un grupo de 100.000 nacidos vivos, utilizados como raíz de la Tabla, alcanza la edad exacta x .

Probabilidad de morir, $q(x,n)$.

Es la probabilidad que tiene una persona de edad exacta x , de fallecer antes de cumplir la edad $x+n$.

Tasa de mortalidad infantil, $q(0,1)$.

Es la probabilidad que tiene un recién nacido, de morir antes de cumplir un año de vida. En la práctica, se define como el cociente entre las defunciones de menores de un año, ocurridas en un lapso de tiempo, y los nacimientos ocurridos en el mismo período.

Número de muertes $d(x,n)$

Son las personas que fallecen entre el momento que cumplen la edad x , y antes de cumplir la edad $x+n$.

Tiempo vivido entre las edades x y $x+n$, $L(x,n)$.

Es el número de años vividos, entre las edades exactas x y $x+n$, por los sobrevivientes de un grupo inicial de 100.000 nacimientos, utilizados como raíz de la Tabla. Representa, además, la población estacionaria con edades comprendidas entre las edades exactas x y $x+n$.

Tasa central de mortalidad, $m(x,n)$.

Es el cociente entre las defunciones ocurridas entre las edades exactas x y $x+n$ ($d(x,n)$), y la población estacionaria ($L(x,n)$), correspondientes a esas mismas edades.

Tiempo vivido desde la edad x , $T(x)$.

Es el número total de años que les resta por vivir a los sobrevivientes de edad exacta x .

Esperanza de vida a la edad x , $e(x)$.

Es el número medio de años que, en promedio, les resta por vivir a los sobrevivientes de edad exacta x .

Relación de sobrevivencia entre x y $x+n$, $P(x,x+n)$.

Es la probabilidad que tienen los componentes de la población estacionaria con edades comprendidas entre las edades exactas x y $x+n$, de sobrevivir cierto número de años, que en el caso de las Tablas de Mortalidad publicadas en este Boletín, corresponde a 5 años.

DEFINITIONS OF SOME LIFE TABLE FUNCTIONS

Survivors to age x , $l(x)$.

This is the number of persons who, according to the Life Table, reach exact age x , out of an initial generation of 100.000 persons born alive taken as the radix of the table.

Probability of dying, $q(x,n)$.

This is the probability which a person of exact age x has of dying before reaching age $x+n$.

Infant mortality rate, $q(0,1)$.

This is the probability that a new-born child dies before completing one year of life. In practice, it is defined as the quotient between the deaths of children under one year of age during a period of time, and the number of births during the same period.

Number of deaths, $d(x,n)$.

This is the number of deaths between the age x and before they become the age $x+n$.

Time lived between ages x and $x+n$, $L(x,n)$.

This is the number of years lived by the generation of 100 000 births, used as the radix of the Table, between the age x and $x+n$. It also represents the number of individuals in a stationary population between the exact ages x and $x+n$.

Central mortality rate x , $m(x,n)$.

This is the quotient between the deaths occurred between the exact ages x and $x+n$ ($d(x,n)$), and the stationary population ($L(x,n)$), corresponding to those same ages.

Time lived from age x , $T(x)$.

This is the total number of years of life remaining for the survivors of the exact age x .

Life expectancy at age x , $e(x)$

This is the mean number of years of life remaining to each of the survivors at exact age x .

Survival ratio between x and $x+n$, $P(x,x+n)$.

This is the probability which the individuals of a stationary population, aged between x and $x+n$, have of surviving for a given additional period, that in the case of the life tables published in this Bulletin, corresponds to 5 years.

NOTAS EXPLICATIVAS

1. La información correspondiente a otros países y territorios del Caribe, incluidas en los cuadros 1a y 1b proviene de proyecciones de población elaboradas por la División de Población de las Naciones Unidas.

2. Las cifras de población para los años calendario de 1990 al 2000 que se presentan en el cuadro 1b, se obtuvieron por interpolación, utilizando para este efecto los multiplicadores de Karup-King¹.

3. Las poblaciones proyectadas, incluidas en los cuadros 1a y 1b, corresponden a la proyección cuya variante de fecundidad se denomina "media" o "recomendada".

4. NOTAS Y FUENTES DE ESTIMACIONES Y PROYECCIONES DE LA POBLACIÓN, CORRESPONDIENTE A LA HIPOTESIS RECOMENDADA.

Argentina:

Las estimaciones y proyecciones de población corresponden a las publicadas en: "Estimaciones y proyecciones de población, 1950-2050. Total del país (Versión revisada)", (LC/DEM/R.247), serie OI N°108, Buenos Aires, Instituto Nacional de Estadística y Censos/ Centro Latinoamericano de Demografía (INDEC/CELADE), 1995. Se consideraron los resultados del Censo de Población y de Vivienda de 1991 y las Estadísticas Vitales hasta el año 1993.

Bolivia:

Las estimaciones y proyecciones de población corresponden a las publicadas en: "Bolivia: estimaciones y proyecciones de la población, 1950-2050", (LC/DEM/R.199), serie OI N°92, La Paz, Instituto Nacional de Estadística/ Centro Latinoamericano de Demografía (INE/CELADE), marzo de 1995. Se consideró el Censo de Población y Vivienda de 1992. Con posterioridad, en CELADE, se

hizo una revisión considerando los resultados de la Encuesta Nacional de Demografía y Salud (DHS) 1994 sin introducir modificaciones.

Brasil:

Las estimaciones y proyecciones de población, de carácter provisorio, fueron elaboradas por CELADE en agosto de 1995, en consulta con la "Fundação Instituto Brasileiro de Geografia y Estatística" (IBGE). Se consideraron las "Pesquisa Nacional de amostra por Domicílio" (PNAD) de 1984 y 1995, los resultados (preliminares y no publicados) del Censo de Población y Vivienda de 1991 y Estadísticas Vitales hasta el año 1993.

Colombia:

Las estimaciones y proyecciones de población fueron elaboradas por el Departamento Administrativo Nacional de Estadística (DANE) y el Departamento Nacional de Planeación (DNP) en colaboración con CELADE, en 1991. En diciembre de 1995, en CELADE, se introdujeron pequeñas modificaciones en la fecundidad y la mortalidad a partir de 1980, tomando en consideración los resultados preliminares de la Encuesta Nacional de Demografía y Salud (DHS) de 1995. No se dispuso de los resultados del Censo de Población y Vivienda de 1993.

Costa Rica:

Las estimaciones y proyecciones de población fueron elaboradas en 1991 por la Dirección General de Estadística y Censos, Ministerio de Planificación y el Instituto de Vivienda y Urbanismo (INVU) en colaboración con CELADE. En 1995, en CELADE, se hizo una revisión considerando Estadísticas Vitales hasta el año 1992, sin introducir modificaciones.

1 H.Shryock, J. Siegel and associates, *The methods and Materials of Demography*, New York, Academic Press, 1976.

Cuba:

Las estimaciones y proyecciones de población fueron elaboradas por el CELADE en diciembre de 1995. Se consideraron Estadísticas Vitales hasta 1992.

Chile:

Las estimaciones y proyecciones de población corresponden a las publicadas en "Estimaciones y proyecciones de población por sexo y edad. Total del País, 1950-2050", (LC/DEM/R.127), serie OI N°97, Santiago, Chile, Instituto Nacional de Estadística/ Centro Latinoamericano de Demografía (INE/CELADE), 1995. Se consideraron el Censo de Población y Vivienda de 1992 y Estadísticas Vitales hasta 1992.

Ecuador:

Las estimaciones y proyecciones de población corresponden a las publicadas en: "Ecuador: estimaciones y proyecciones de población. periodo 1950-2010", Quito, Consejo Nacional de Desarrollo (CONADE)/ Instituto Nacional de Estadística y Censos (INEC)/ Centro Latinoamericano de Demografía (CELADE)/ Fondo de Población de Naciones Unidas (FNUAP), marzo de 1993; (la extensión hasta el año 2050 se preparó en CELADE). Se consideraron el Censo de Población y Vivienda de 1990 y Estadísticas Vitales hasta el año 1991. En octubre de 1995, en CELADE, se introdujeron pequeñas modificaciones en la fecundidad y la mortalidad infantil a partir de año 2020 para ajustarse a los criterios de la División de Población de Naciones Unidas.

El Salvador:

Las estimaciones y proyecciones de población fueron elaboradas por CELADE, en diciembre de 1995. Se consideraron el Censo de Población y Vivienda de 1992 (tabulaciones especiales del censo aun no publicado a la fecha de la elaboración de la proyección), Estadísticas Vitales hasta 1993 y la Encuesta Nacional de Salud Familiar (DHS) de 1993.

Guatemala:

Las estimaciones y proyecciones de población corresponden a la publicación: "Guatemala: estimaciones y proyecciones de población, 1950-2025", (IC/DEM /R.01), San José, Dirección General de Estadística/ Centro Latinoamericano de Demografía (CELADE), en prensa. Se consideraron los resultados del Censo de población y Vivienda de 1994 y estadísticas vitales hasta el año 1993.

Haití:

Las estimaciones y proyecciones de población fueron elaboradas en 1991 por el "Institut Haitien de Statistique et d'Informatique" (IHSI) en colaboración con CELADE. En 1995, en CELADE, se hizo una revisión considerando los resultados de la "Enquête mortalité, morbidité et utilisation des services (DHS) de 1994" sin introducir modificaciones.

Honduras:

Las estimaciones y proyecciones de población fueron elaboradas por CELADE en 1992. Se consideraron el Censo de Población y Vivienda de 1988 y la Encuesta Demográfica Nacional de 1991-1992.

México:

Las estimaciones y proyecciones de población fueron elaboradas por CELADE en consulta con el Consejo Nacional de Población (CONAPO), en junio de 1994, versión preliminar. Se consideraron el Censo de Población y de Vivienda de 1990, las Estadísticas Vitales hasta 1990 y la Encuesta Nacional de Dinámica Demográfica de 1992. En noviembre de 1995, en CELADE, se introdujeron pequeñas modificaciones en la fecundidad a partir de 2020 para ajustarse a los criterios de la División de Población de las Naciones Unidas. No se dispuso de información del Censo de Población y Vivienda de 1995.

Nicaragua:

Las estimaciones y proyecciones de población fueron elaboradas en septiembre de 1994 por el Instituto Nacional de Estadística y Censos (INEC) en colaboración con CELADE. Se consideraron las Estadísticas Vitales hasta 1992 y la Encuesta sobre Salud Familiar de 1993. No se dispuso de la información del Censo de Población y Vivienda de 1995.

Panamá:

Las estimaciones y proyecciones de población fueron elaboradas por la Dirección de Estadística y Censos y se encuentran publicadas en: "Panamá: proyección de la población total del país por sexo, según grupos de edad: años 1990-2025", Estadística panameña, boletín especial", Ciudad de Panamá Dirección de Estadística y Censo, abril de 1993. CELADE las adoptó en 1993 y preparó la extensión hasta el año 2050. Se consideraron el Censo de Población y Vivienda de 1990 y las Estadísticas Vitales hasta el año 1990. En setiembre de 1995, en CELADE, se introdujeron pequeñas modificaciones en la fecundidad a partir del año 2015 para ajustarse a los criterios de la División de Población de las Naciones Unidas.

La denominada Zona del Canal de Panamá se incorporó a Panamá en las proyecciones oficiales a partir de 1980.

Paraguay:

Las estimaciones y proyecciones de población, elaboradas en colaboración con CELADE, corresponden a las publicadas en: "Paraguay: estimación y proyección de la población total, según sexo y grupos de edad, período 1950-2050", Dirección General de Estadística y Censos (DGEEC)/ Fondo de Población de las Naciones Unidas (FNUAP), diciembre de 1994. Se consideraron el Censo de Población y Vivienda de 1992, las Estadísticas Vitales hasta el año 1993 y la Encuesta Nacional de Demografía y Salud de 1990. En abril de 1995, en CELADE, se introdujeron pequeñas modificaciones en la fecundidad a partir del año 2025 para ajustarse a los criterios de la División de Población de las Naciones Unidas.

Perú:

Las estimaciones y proyecciones de población se encuentran publicadas en: "Proyecciones de la población del Perú, 1995-2025", Boletín de análisis demográfico N°34, (LC/DEM/R.229), serie OI N°102, INEI/UNFPA/CELADE, abril de 1995. (La extensión hasta el año 2050 se preparó en CELADE). Se consideraron el Censo de Población y Vivienda de 1993, las Estadísticas Vitales hasta el año 1992 y la Encuesta Demográfica y de Salud Familiar (DHS) 1991-1992.

República Dominicana:

Las estimaciones y proyecciones de población fueron elaboradas por la Oficina Nacional de Estadística (ONE) en colaboración con CELADE, marzo de 1993. Se consideraron las Estadísticas Vitales hasta el año 1985 y la Encuesta de Demografía y de Salud (DHS) de 1991. No se dispuso de la información del Censo de Población y Vivienda de 1993. En octubre de 1995, en CELADE, se introdujeron pequeñas modificaciones a la fecundidad y la mortalidad infantil a partir del año 2020 para ajustarse a los criterios de la División de Población de las Naciones Unidas.

Uruguay:

Las estimaciones y proyecciones de población se encuentran publicadas en "Estimaciones y proyecciones de población, 1950-2025", Montevideo, Dirección General de Estadística y Censos, 1989. Proyección elaborada en colaboración con CELADE, (la extensión hasta el año 2050 se preparó en CELADE). Se consideraron el Censo de Población y Vivienda de 1985 y Estadísticas Vitales hasta el año 1987. En setiembre de 1995, en CELADE, se hizo una revisión considerando Estadísticas Vitales hasta el año 1993. Se introdujeron pequeñas modificaciones en la fecundidad a partir del año 2020, para ajustarse a los criterios de la División de Población de las Naciones Unidas. El Censo de Población y Vivienda fue levantado en mayo de 1996,

de las Naciones Unidas. El Censo de Población y Vivienda fue levantado en mayo de 1996, por lo que no se dispuso de la información.

Venezuela:

Las estimaciones y proyecciones de población fueron elaboradas por la Oficina

Central de Estadística e Informática (OCEI), en colaboración con CELADE, en noviembre de 1993. Se consideraron los resultados del Censo de población y Vivienda de 1990 y las Estadísticas Vitales hasta el año 1990.

EXPLANATORY NOTES

1. The information for other Caribbean countries and territories given in tables 1a and 1b comes from population projections prepared by the United Nations Population Division.

2. The population figures for calendar years from 1990 to 2000 presented in table 1b were obtained by interpolation, using Karup-King multipliers.¹

3. The projected populations shown in tables 1a and 1b are based on a "medium" or "recommended" fertility projection.

4. NOTES AND SOURCES FOR POPULATION ESTIMATES AND PROJECTIONS BASED ON THE RECOMMENDED HYPOTHESIS

Argentina:

Population estimates and projections correspond to those published in "Estimaciones y proyecciones de población, 1950-2050. Total del país (Versión revisada)" (LC/DEM/R.247), OI series No. 108, Buenos Aires, National Institute of Statistics and Censuses/Latin American Demographic Centre (INDEC/CELADE), 1995. They include the results of the 1991 Population and Housing Census and vital statistics up to 1993 were.

Bolivia:

Population estimates and projections correspond to those published in "Bolivia: estimaciones y proyecciones de la población, 1950-2050" (LC/DEM/R.199), OI series No. 92, La Paz, National Institute of Statistics/Latin American Demographic Centre (INE/CELADE), March 1995. They include the 1992 Census of Population and Housing. These figures were later review by CELADE in light of the 1994 National Demographic and Health Survey (DHS), without amendment.

Brazil:

Provisional population estimates and projections prepared by CELADE in August 1995, in collaboration with the Brazilian Geographical and Statistical Institute. They include the 1984 and 1995 National Household Surveys, the (preliminary, unpublished) results of the 1991 Population and Housing Census, and vital statistics up to 1993.

Colombia:

Population estimates and projections prepared by the National Bureau of Statistics and the National Planning Department, in collaboration with CELADE, in 1991. In December 1995 CELADE made slight amendments to the fertility and mortality rates from 1980 onwards, in light of the preliminary results of the 1995 National Demographic and Health Survey (DHS). The results of the 1993 Population and Housing Census were not available.

Costa Rica:

Population estimates and projections prepared by the Department of Statistics and Censuses, the Ministry of Planning and the Institute of Housing and Urban Development, in collaboration with CELADE, in 1991. In 1995 CELADE review the figures in light of the vital statistics up to 1992, without amendment.

Cuba:

Population estimates and projections prepared by CELADE in December 1995. They include vital statistics up to 1992.

Chile:

Population estimates and projections correspond to those published in "Estimaciones y proyecciones de población por sexo y edad. Total del país,

1 H. Shryock, J. Siegel, and associates, *The Methods and Materials of Demography*, New York, Academic Press, 1976.

1950-2050," (LC/DEM/R.127), OI series No. 97, Santiago, Chile, National Institute of Statistics/ Latin American Demographic Centre (INE/CELADE), 1995. They include the results of the 1992 Population and Housing Census and vital statistics up to 1992.

Ecuador:

Population estimates and projections correspond to those published in "Ecuador: estimaciones y proyecciones de la población, período 1950-2010", Quito, National Development Council/National Institute of Statistics and Censuses/ Latin American Demographic Centre (CELADE)/ United Nations Population Fund (UNFPA), March 1993. (The extension up to 2050 was prepared by CELADE). They include the 1992 Population and Housing Census and vital statistics up to 1991. In October 1995, CELADE made slight amendments to the fertility and infant mortality rates from 2020 onwards in order to adjust to United Nations Population Division guidelines.

El Salvador:

Population estimates and projections prepared by CELADE, in December 1995. They include the 1992 Population and Housing Census (special tabulations, since the census had not been published when the projections were prepared), vital statistics up to 1993 and the 1993 National Family Health Survey (DHS).

Guatemala:

The population estimates and projections are taken from the publication: "Guatemala: estimaciones y proyecciones de población 1950-2050", (LC/DEM/R.01), San José, Department of Statistics/Latin American Demographic Centre (CELADE), in press. The publication reflects the results of the 1994 Population Census and vital statistics to 1993.

Haiti:

Population estimates and projections prepared by the Haitian Institute of Statistics and Information Sciences, in collaboration with CELADE, in 1991. In 1995 CELADE review the figures in light of the results of the 1994

Mortality, Morbidity and Use of Services Survey (DHS), without amendments.

Honduras:

Population estimates and projections prepared by CELADE in 1992. They include the 1988 Population and Housing Census and the 1991-1992 National Demographic Survey.

Mexico:

Preliminary population estimates and projections prepared by CELADE in collaboration with the National Population Council, in June 1994. They include the 1990 Population and Housing Census, vital statistics up to 1990 and the 1992 National Survey of Demographic Dynamics. In November 1995, CELADE made slight adjustments to the fertility rates from 2020 onwards to bring them into line with United Nations Population Division guidelines. Information from the 1995 Population and Housing Census was not available.

Nicaragua:

Population estimates and projections prepared by the National Institute of Statistics and Censuses, in collaboration with CELADE, in September 1994. They include vital statistics up to 1992 and the 1993 National Family Health Survey. Information from the 1995 Population and Housing Census was not available.

Panama:

Population estimates and projections prepared by the Statistics and Census Office, and published in "Panamá: proyección de la población total del país por sexo, según grupos de edad: años 1990-2025", Estadística panameña, Boletín especial, Panama City, Statistics and Census Office, April 1993. CELADE adopted them in 1993 and prepared the extension up to 2050. They include the 1990 Population and Housing Census and vital statistics up to 1990. In September 1995, CELADE made slight adjustments to the fertility rates from 2015 onwards to

bring them into line with United Nations Population Division guidelines.

The Canal area was incorporated into official projections for Panama as from 1980.

Paraguay:

Population estimates and projections, prepared in collaboration with CELADE, correspond to those published in "Paraguay: estimación y proyección de la población total, según sexo y grupos de edad. Período 1950-2050", Department of Statistics, Surveys and Censuses/United Nations Population Fund (UNFPA), December 1994. They include the 1992 Population and Housing Census, vital statistics up to 1993 and the 1990 National Demographic and Health Survey. In April 1995, CELADE made slight adjustments to the fertility rates from 2025 onwards to bring them into line with United Nations Population Division guidelines.

Peru:

Population estimates and projections were published in "Proyecciones de la población del Perú: 1995-2025" (LC/DEM/R.229), OI Series No. 102, Boletín de análisis demográfico N° 34. National Institute of Statistics and Information Sciences/United Nations Population Fund (UNFPA)/ Latin American Demographic Centre (CELADE), April 1995. (The extension up to 2050 was prepared by CELADE). They include the 1993 Population and Housing Census, vital statistics up to 1992 and the 1991-1992 Demographic and Family Health Survey (DHS).

Dominican Republic:

Population estimates and projections prepared by the National Statistical Office, in

collaboration with CELADE, in March 1993. They include vital statistics up to 1985 and the 1991 Demographic and Health Survey (DHS). Information from the 1993 Population and Housing Census was not available. In October 1995, CELADE made slight adjustments to the fertility and infant mortality rates from 2020 onwards to bring them into line with United Nations Population Division guidelines.

Uruguay:

Population estimates and projections were published in "Estimaciones y proyecciones de población. 1950-2025", Montevideo, Department of Statistics and Censuses, 1989. Projections prepared in collaboration with CELADE (the extension up to 2050 was prepared by CELADE). They include the 1985 Population and Housing Census and vital statistics up to 1987. In September 1995, CELADE reviewed the figures in light of the vital statistics up to 1993. Slight adjustments to the fertility rates from 2020 onwards have been made, to bring them into line with United Nations Population Division guidelines. Since the Population and Housing Census was taken in May 1996, the information was not available.

Venezuela:

Population estimates and projections prepared by the Central Office for Statistics and Information Sciences, in collaboration with CELADE, in November 1993. They include the results of the 1990 Population and Housing Census and vital statistics up to 1990.

PUBLICACIONES PERIODICAS PERIODICAL PUBLICATIONS
