Title
Review of some macroeconometric models in the Caribbean region.
Bridgetown, Central Bank of Barbados, 1980. 29p.
(Paper presented to the 17th Meeting of Technicians of Central Banks of the American Continent, Bogota, Colombia, Nov. 29, 1980).
Imprint

Abstract —

Reviews of models of varying sizes constructed for the more developed economies of the region such as Carter (1970), Harris (1970), Manhertz (1971) and K. Worrel (1979) for Jamaica, Persad (1975) and Joefield-Napier (1979) for Trinidad and Tobago; and D. Worrell and L. Holder (1979) for Barbados examining their sector composition, size and scope, points of similarities and differences with other models dealing with the same economy, the main findings and the way each model hangs together as a whole. Highlights also the problems associated with model building for developing countries, methodology, scope and main findings, criticism and evaluation of the models and suggestions for future research on macroeconometric models for the region.

SAMPLE ENTRY

AGRICULTURAL PLANNING

001

CDC

Barbados. Ministry of Agriculture, Food and Consumer Affairs, Agricultural Planning Unit.

Scope, objectives and special problems of planning for agricultural development with reference to Barbados. 1980. 21p. (CDCC/PO/WP/13).

002

CDC

Conference of Commonwealth Caribbean Government Statisticians, 6. Nassau, Bahamas, 27 November - 5 December 1974.

Quantitative techniques for planning in agriculture; some data considerations / by J. Dukhia. Georgetown, University of Guyana, 1974. 24p.

Presents two types of quantitative techniques that are normally used for agricultural planning, the regression type models and mathematical programming models. In the planning process, economic efficiency must be a fundamental criterion and so a linear programming model designed for planning the regional agricultural development in Guyana is explained.

003

CDC

U.N. Caribbean Regional Integration Advisory Team (CRIAT).

Planning to meet the Caribbean's growing food needs: framework for a regional food plan / Nassau A. Adams. Port-of-Spain, UN-CRIAT, 1975. 51p.

Identifies the main outlines of the problem in relation to the major food items and in terms of the scale of the production effort required, then goes on to indicate the directions in which regional policy must move to achieve the desired objectives of increased regional self-sufficiency, taking into account the pattern of regional resource availabilities and the scope for optimally combining these resources.

004

CDC

U.N. ECLA. Subregional Office for the Caribbean. CDCC. Second Meeting of Planning Officials in the Caribbean. Kingston, Jamaica 29 May - 2 June 1980.

Institutionalization of training in agricultural planning and project analysis in the Caribbean: problems and experience / by A.H. Brathwaite. 1980. 14p. (CDCC/PO/WP/80/21).

Emphasizes the decline of plantation agriculture and the importance of small scale independent farming as the basis of agricultural planning in the Caribbean. Notes however that a distinction must be made between the MDC's and LDC's; for the former, programmes would seem to be relatively more important, the stress being on the management of inputs, monitoring, control and evaluation, and the development of effective linkages between the various economic institutions. For the latter, the project approach is more appropriate and suggests that training should initially be aimed at the planning units.

005

CDC

U.N. ECLA. Subregional Office for the Caribbean. CDCC. First Meetings of Planning Officials in the Caribbean, La Habana, Cuba, 25-31 January 1979.

Political economy of agricultural and rural sector planning in Caribbean societies / George L. Beckford. Port-of-Spain, ECLA, 1979. 29p.

006

UNDIESA

U.N. Multi-Sector Regional Planning Project for the Caribbean Community.

Use of linear programming for planning of an optimal family farm in St. Vincent - a methodological approach / E. Blommestein. Port-of-Spain, U.N. Multi-Sector Regional Planning Project, 1978. 27p.

Concludes that programming is possible and advantageous. Optimal production pattern, range of gross margins for which pattern stays optimal, and constraints which are potential bottlenecks are indicated.

Statistical data relating to labour, products, production activity, crop yields, seasonality of crops, market and agro-technical constraints, land use, non-basic activity costs and shadow prices are included.

Second Meeting of Planning Experts of the Caribbean, Kingston, Jamaica, 29 May - 2 June, 1980. (E/CEPAL/ILPES/G.3).

El desarrollo significa crear las condiciones para la realización de la personalidad humana. Su evaluación debe, por tanto, tomar en cuenta tres criterios económicos ligados entre sí: si ha habido reducción en: (i) la pobreza; (ii) el desempleo; (iii) la desigualdad. El producto nacional bruto puede crecer rápidamente sin ningún mejoramiento dentro de estos criterios; por lo tanto, el desarrollo debe ser medido en forma más directa. Los problemas conceptuales y prácticos de un número de indicadores se discuten aquí, así como las implicancias de la planificación, tanto nacional como internacional.

Mc Rae, E.

Environmental planning in the Wider Caribbean and Latin America: constraints to an effective regional institutional structure. Port-of-Spain, 1980. 20p.

States that the countries of the Wider Caribbean exhibit a number of similar features of environmental impact as a result of the development process. There are likely to be common objectives in most of the national policies for environmental planning, but there may be some variance however concerning the strategies for achieving these objectives and the institutional arrangements devised for implementation. This variance does not however negate the benefits that can be derived from regional co-operation, but rather brings into focus the caution required in formulating techniques and institutions for co-operative actions.

Domínguez, H.

Modelo matemático para la planificación de la producción de neumáticos / H. Domínguez and P. Friedman. Economía y Desarrollo, vol. 58, jul.-agosto, 1980. p. 211-221.

La empresa de neumáticos de la Habana tiene gran surtido de productos y posee cuatro fábricas. Se analiza la problemática que enfrenta la planificación de producción de neumáticos para satisfacer las necesidades nacionales. En la primera parte del trabajo se describe el proceso tecnológico de producción de neumáticos que comprende cinco fases: preparación, preconstrucción, construcción, vulcanización e inspección. Después se describe el modelo matemático que consiste en un conjunto de ecuaciones lineales que muestran las relaciones existentes entre las variables. Permite hacer planes para la producción. No es de carácter rígido, sino que requiere una actualización de acuerdo con los aspectos económicos y técnico-productivos de la empresa.

CUJUCEPLAN

López Coll, A. and Santiago, A.

Notas sobre el proceso de planificación en Cuba. Economía y Desarrollo, (29) May-June 1975. p. 9-25.

En Cuba la planificación es el instrumento que regula el movimiento de las proporciones económicas. El plan único de la economía nacional constituye una integración de planes por ramas, categorías, territorios, para formar un sistema. En la elaboración del plan se utilizan tres métodos fundamentales: analíticos, de coeficientes y de balances. La estrategia de desarrollo que se persigue en cada período expresa el conjunto de los objetivos sociales, económicos y políticos. El plan anual es el instrumento básico para la dirección de la producción y los servicios. Es confeccionado a partir del diagnóstico general de la economía, los objetivos trazados en la estrategia y el plan multianual y las directivas político-económicas concretas del año para el cual se confecciona. Se explican, además, las bases de la planificación en Cuba y el marco institucional de la planificación.

Hope, K.R.

Development policy in Guyana: planning, finance and administration. Boulder, Colorado, Westview Press, 1979. 260p.

This study of Guyana's economy, both analytical and empirical, examines the literature on development policy and applies various theoretical frameworks to data acquired in Guyana since 1945. It considers planning, finance and administration, seeking to determine whether the Guyana government's development policy has been an instrument of economic growth. It focuses on three issues: whether government policy directs planning in a manner conducive to increased levels of productive investment; the use of planning tools to raise resources for development expenditure and the provision of support to successfully implement policy goals.

CDC

Jamaica. National Planning Agency.

Integration of long term, medium term and short term plans: a note on Jamaica's experience. Kingston, National Planning Agency, 1978. 12p.

Second Conference of Ministers of Planning and Heads of Planning Agencies, Lima, Peru, 15-18 November 1978.

Presenta la evolución del Sistema de Planificación desde 1945 a 1977 y enumera los planes instituídos en el período; entrega un cuadro comparativo de los tres planes desde 1946 a 1968. El Plan 1963-1968 redactado después de la independencia utiliza por primera vez en Jamaica los métodos de planificación macroeconómica indicativa. En 1977 se adoptó el Plan de Producción de Emergencia orientado hacia dos objetivos principales: movilizar la producción nacional adicional y el intercambio internacional. El Plan de Desarrollo Quinquenal tiende a dar un marco para el crecimiento y recuperación del país en el largo plazo; detalla objetivos y principales aspectos. Entrega un esquema del proceso de planificación: documentos, instituciones y fechas.

El estado de la planificación en América Latina y el Caribe
In Cuadernos de la Sociedad Venezolana de Planificación, No. 153-155,
p. 81-135.

Presents concepts of national planning and establishes typologies which correspond to the situation in Latin America and the Caribbean. Identifies four basic types which are based on the concept of the mixed economy which is the predominant system in the region and

reviews the characteristics of each. Analyses actual plans formulated during the 1970's using the typologies outlined focusing on the scope, objectives, global, sectoral and regional strategies, short term plans, methods, techniques and models used and institutions responsible for formulation of plans. The common elements are identified and differences in plans based on priorities and governments' objectives are also analysed.

053

CDC

Miranda, M.

Distribución regional del plan nacional de inversiones. Economía y Desarrollo, vol. 6, abril-junio 1971. p. 85-95.

Se describe un modelo de planificación que se basa en la prioridad de determinados objetivos regionales en detrimento de reducir la expansión de las regiones que tienen un gran poder económico y que forman dentro del contexto nacional las regiones de primer orden o más desarrolladas. En la primera parte se hacen algunos planteamientos sobre cuestiones que se deben tener en cuenta en la planificación económica cuando se incluyen los problemas espaciales. La planificación de la economía cubana plantea los siguientes rangos espaciales: nacional, regional y municipal. Se trata de buscar la distribución óptima de los recursos, considerando que uno de los objetivos de la planificación regional es reducir las disparidades económicas regionales. Esto hay que tenerlo en cuenta en la asignación de recursos a aquellas regiones más atrasadas del país.

CDC

Rodríguez, R.

Modelos matemáticos de desarrollo regional. Economía y Desarrollo, vol. 6, abril-junio 1971. p. 96-109.

Estudio sobre la planificación regional para impulsar el desarrollo económico. La teoría de la polarización plantea que es necesario crear polos de desarrollo que contribuyan al auge económico de las zonas o regiones más atrasadas del país. Esta teoría tiene aspectos negativos que es necesario tener en cuenta dentro de la planificación regional. Esta problemática puede ser enfocada por dos métodos diferentes que se expresan por diversos modelos. En este artículo se

describen dos modelos. El primero es un modelo de H.B. Chenery, que fue desarrollado para la economía italiana tomando por base a tres extensas regiones: norte, centro y sur. El segundo modelo es de J.R. Boudeville que se enmarca dentro de los llamados modelos de crecimiento polarizado. En su formulación se toman en cuenta la presencia de polos económicos y la existencia de regiones polarizadas.

Thomas, C.Y.

Notes on socialist planning methodology. Georgetown, University of Guyana, 1977. 24p.

This lecture generally covers some considerations for socialist planning, and the tasks of planning authorities. Topics include: the planning of growth rates; the contribution of living labour to output; sectoral analysis; the system of balances; the programming of activity analysis; project analysis; price formation; foreign trade; and some problems of Caribbean application.

CDC

Davies, O. and Witter, M.

The Jamaican planning system: its evolution, present situation and potential. Kingston, 1980. 88p.

Divided into four chapters, this monograph deals with the development of planning in Jamaica and sketches the structure and operations of the main agencies presently involved in the system in Chapter 1. Chapter 2 reviews the four National Development Plans prepared since 1955 as well as the First National Physical Plan 1977 while there is an examination of the operations of the present system in Chapter 3. Chapter 4 indicates a potential role for planning in the society. The appendices contain an organizational chart of the executive arm of the Government, a list of state enterprises categorized by sector and a proposed revised bureaucracy.

Some aspects of the planning system in the Republic of Cuba / JUCEPLAN. Port-of-Spain, ECLA, 1979. Iv. (CDCC/PO/WP/78/15).

Presents an overview of the planning system in Cuba from 1962 to 1978. Describes basic aspects, general characteristics, and the structure of the national economic plan, its methodology, system of indices and procedure. The relationship between national and local planning is outlined as well as the planning of aspects related to the social development of the population.

U.N. ECLA. Subregional Office for the Caribbean. CDCC. Second Meeting of Planning Officials in the Caribbean, Kingston, Jamaica, 29 May - 2 June 1980.

Survey of national planning systems in Latin America and the Caribbean: a sub-regional report / N. Boissiere. Port-of-Spain, ECLA, 1980. 50p. (CDCC/PO/WP/80/3).

Examines the current state of planning in several of the English-speaking Caribbean countries. This is based on a detailed questionnaire sent to the respective countries and contends that what is really being done in the region is not planning. Argues that the present state of planning is one in which all countries surveyed have some administrative framework for planning but no country is in fact using the planning mechanism effectively, and cites the major hindrances.

Planning for the Caribbean / Betty Sedoc-Dahlberg. 1979. 18p. (CDCC/PO/WP/78/10).

The communicative model outlined here can be typified as a planning model in which an institutional framework has been developed to continuously adjust the development goals defined by the goalmakers to the goals and expectations of the people. The model also offers the possibility of finding out at a very early stage if implementation of innovations would be successful. It informs about the openness of the people for change and gives us the possibility for improving information techniques and making the necessary adjustments on our own society. States that it can be used for all types of planning and is adaptable to local circumstances.

Ellis, G.

Development planning and appropriate technology: a dilemma and a proposal. World Development, vol. 9, no. 3, 1981. p. 251-262.

Examines the present system of project paper preparation and project planning used by US AID and many donor agencies. Three approaches for meeting the evident weaknesses of the system - a holistic approach to the planning problem, an operant-conditioning approach to implementation, and a 'process' approach to planning and implementation - are presented and critiqued. On the basis of the critique, an approach which is grounded in a search for an approximately appropriate technology which "twiddles the technical knobs" - is supported; and a proposal for an appropriate technology evaluation system which would analyse alternative technologies, deliver information to the field level, supply needed information on technologies and implementation, constrain donor planners, reduce lag time, incorporate evaluations into future planning, and reduce dependence on planners is presented.

095

CDC

U.N. ECLA. Subregional Office for the Caribbean. CDCC. First Meeting of Planning Officials in the Caribbean. La Habana, Cuba, 25-31 January, 1979.

Towards a macro dynamic methodology for transportation planning in the Caribbean environment / W. Dookeran. Port-of-Spain, ECLA, 1978. 13p. (CDCC/PO/WP/78/5).

Identifies three major components of the transport function namely the capital spatial and technological components. These are then used to interpret and analyse the functional relationships between the transport sector and the rest of the economy. The aggregate effect of transport decisions on the overall economic performance of the economy may be traced through an analysis of the capital coefficient and aggregate production function. The spatial component allows transport decisions to be evaluated against the effect they may have on the level and sectoral accessibility of factor endowments in the economy. Technical progress operates through increasing productivity and/or lowering of real costs, both of which may be used as proxies to measure and evaluate the effects of transport decisions on macro economic quantities.
