

INTERNATIONAL MERCHANDISE TRADE IN LATIN AMERICA AND THE CARIBBEAN

ECLAC Division of International Trade and Integration – www.eclac.cl/comercio

BULLETIN NUMBER 2

FIRST QUARTER 2011

Main developments

- International trade data for the last quarter of 2010 confirmed a recovery in the region exports and imports, which grew by 27% for exports and 31% for imports in 2010 compared to 2009.
- Trade has recovered its losses due to the crisis, with the exception of Panama, which registered a drop in exports, and the Bolivarian Republic of Venezuela, where demand for imported goods registered only a slight recovery (Table 1).
- LAC recent export growth is the lowest when compared to other emerging regions, but it is higher than the growth of exports in industrialized countries and the global average (Table 2).
- In many countries, monthly trade flows in December were significantly higher than the monthly average for the previous 11 months, particularly in Brazil, Chile, Colombia, Ecuador and Peru (Tables 2 and 3).
- Two thirds of the growth of the region's exports are attributed to the increase in the price of the region's export basket (18%), with increases greater than 20% in South America, where it is worth noting that in Chile, while the volume of exports decreased slightly, the prices increased by 31%.
- In Mexico and Central America, on the other hand, the recovery in exports was more as a result of increases in volume. This behavior, with less dynamic export prices, follows from an export basket that is more intensive in manufactured products, which experienced slower growth in 2010 in comparison with natural resources, which are more important in the South American export basket.
- While the region's exports grew at a slower pace than its imports, in 2010 Latin America and the Caribbean registered a trade surplus of over US\$ 16 000 million (Table 1).
- Exports to Asia, in particular to China, grew at very high rates that were much higher than those seen during the pre-crisis period. Despite this, exports to China slowed down in November before recovering in December (Chart 2). China's future demand for primary products will depend in large part on that country's domestic inflation expectations. If Chinese authorities move to reduce such pressure with contractionary fiscal and monetary policies, Chinese economic activity will be reduced marginally, affecting the demand for natural resources.
- The data on international prices as of December 2010 show the significant increase in the prices of the main exports of the region. On average, food, drinks and agricultural products grew by slightly more than 17%, with an increase of more than 40% in agricultural products alone. This increase in prices will continue to impact the region's exports through the first months of 2011.

| Caribbean Countries | 1 480 | 1 656 | 1 976 | 1 945 | 1 773 | 1 826 | 1 822 | 1 969 | 1 798 | 1 966 | 2 223 | 1 800 |
| Andean Community | 7 167 | 7 252 | 8 095 | 8 173 | 7 832 | 8 215 | 8 142 | 8 128 | 8 487 | 8 908 | 8 700 | 10 036 |
| MERCOSUR | 16 300 | 16 937 | 21 333 | 22 327 | 25 253 | 24 544 | 24 588 | 26 555 | 26 065 | 25 095 | 24 338 | 27 156 |
| CACM | 2 189 | 2 143 | 2 703 | 2 243 | 2 403 | 2 357 | 2 229 | 2 098 | 2 011 | 2 095 | 2 096 | 2 527 |

The region's exports increased by a significant amount in December, surpassing the average of the previous 11 months. The largest increases occurred in the exports of South American countries, particularly in Brazil, Chile, Colombia, and Ecuador. While export growth slowed in Argentina and Mexico during the last quarter of 2010, the recovery was consolidated at the regional level.

Source: ECLAC based on statistical offices, central banks, export promotion organizations, United States International Trade Commission (USITC), European Union's EUROSTAT and the IMF's Direction of Trade Statistics (DOTS).

Note: Data for Venezuela are calculated by applying the monthly tendency reported in DOTS over official quarterly data. Data for Caribbean Countries are mirror statistics.

Imports grew at a faster pace than exports, continuing the tendency seen since September. The Bolivarian Republic of Venezuela continues with its slow growing imports, which saw an increase of just 1.4%. The imports of the MERCOSUR countries grew by 42.4% in 2010 compared with 2009.

Chart 1. Latin America and the Caribbean: Evolution of Exports, 2009 and 2010

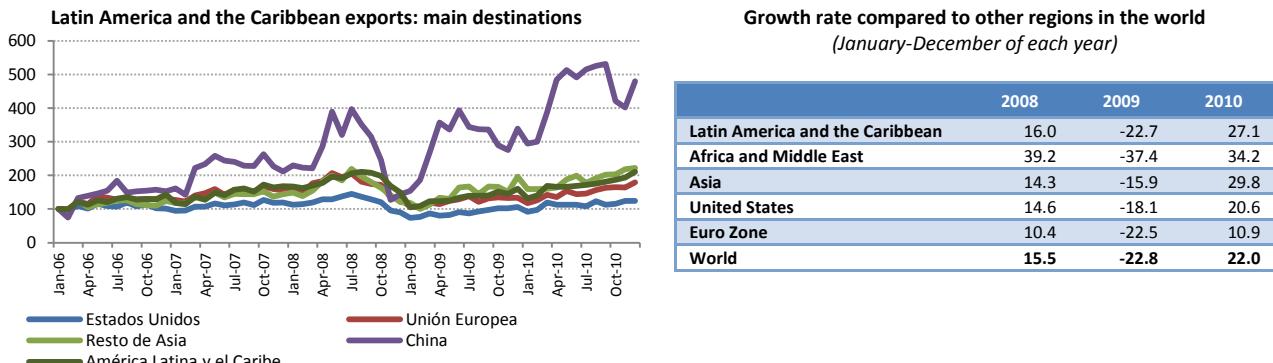

Source: ECLAC based on statistical offices, central banks, export promotion organizations, United States International Trade Commission (USITC), European Union's EUROSTAT and the IMF's Direction of Trade Statistics (DOTS).

Note: Data for Venezuela are calculated by applying the monthly tendency reported in DOTS over official quarterly data. Data for Caribbean Countries are mirror statistics. Does not include Panama.

Looking at the individual sub-regions, the growth in exports was more pronounced in MERCOSUR and in the Andean countries than in the Central American Common Market (CACM). By decomposing the growth of exports by price and volume, it is evident that the recovery was led by a strong increase in prices (18%), while volume growth was 9% (Chart 1b). In Chile and in the Caribbean countries, the volume growth of exports was negative but was more than compensated by strong growth in export prices.

Source: ECLAC based on statistical offices, central banks, export promotion organizations, United States International Trade Commission (USITC), European Union's EUROSTAT and the IMF's Direction of Trade Statistics (DOTS).

Note: Includes data for Argentina, Bolivia (Pl. St. of), Brazil, Chile, Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Paraguay, Peru, Uruguay, Venezuela (Bol. Rep.), and the Caribbean Countries (estimated using mirror statistics from the United States, the European Union and the rest of Latin America).

According to destination, exports continued to show signs of recovery, particularly those directed to the European Union and the United States, which reached their highest levels of the year in December. The most dynamic destination for the region's exports continued to be Asia and China, though exports to the latter showed some signs of deceleration in October and November of 2010. Despite this, China continues to be the market to which the region's exports grew the most in the year. At the same time, intraregional exports increased significantly, reaching nearly 20% of the region's total exports during December. The region's imports, which also grew in the last quarter of 2010, did so at a slower pace than in the beginning of the year, with the exception of intraregional imports, which continued accelerating (Table 3).

At the end of the year the region accumulated a trade balance surplus of US\$ 16 000 million, broken down into a large deficit with Asia (slightly more than US\$ 81 000 million) and a large surplus of US\$ 97 000 million with the United States, the main trading partner for Latin America and the Caribbean.

a Growth rate relative to same period in the previous year.

Intra-subregional trade within the different integration schemes grew significantly, especially in MERCOSUR, where it returned to levels seen prior to the crisis. The countries in the Central American Common Market (CACM) recovered part of their dynamism lost during the crisis. Despite this, the coefficient of intra-subregional trade in December for this group fell from 23.5%, from 28% in November. This places this subregion as the most important in terms of reciprocal trade, followed by MERCOSUR and the Andean Community (CAN), where the same coefficient increased in 2010. Mexico and Chile expanded their trade with the rest of the Latin America and the Caribbean countries. Trade by the Bolivarian Republic of Venezuela continued to show signs of lower dynamism. It is notable that between January and December of 2010, the increase in intraregional trade was of more than one percentage point, higher than the increase in most of the individual integration schemes.

Note: Includes data for Argentina, Bolivia (Pl. St. of), Brazil, Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Paraguay (exports only), Peru, Uruguay and Venezuela (Bol. Rep.).

Exports by product showed generalized increases in all product categories. The largest increases were in mining products and oil. This is precisely the group which, in the last quarter of 2010, saw its exports reach their highest levels. At the same time, exports of food and agricultural products recovered due to the increase in international prices. As for the performance of imports, fuels, consumer goods and capital goods had the highest increases, while imports of intermediate goods showed a strong decrease in December.

Table 6. Main products traded by Latin America and the Caribbean in 2010
(Millions of current dollars, percentages and price indices 2000=100)

| Products (A) | (B) | Value | | | Prices | | | Volume Growth | Prices | | | | |

| Sub-total | 49% | 285 122 | 354 269 | 24.3 | 156.4 | 107.0 | 135.5 | 26.6 | -2.4 | | | | |

Source: ECLAC based on statistical offices, central banks, export promotion organizations, CEPALSTAT and The World Bank. See description of each product and category in the online annex.

Note: the statistics for the products are calculated using data for the main exporters of each product. In each case the total represents more than 70% of the region's total exports, except in gas, where it represents 56%; the coverage averages 80%. In the case of prices, the index is calculated by ECLAC.

(A) Drinks represents an aggregate of coffee and tea; Iron / Steel represents manufactured products. (B) Weight of each product in the total exports of the region; (C) Weight of each products in the region's total exports of natural resources.

The main exports of primary products by the region ended 2010 with an increase of 26.6% in prices and a slight decrease in volume (-2.4%). While the largest increases in prices were largely due to copper and oil, it is notable that food and agropecuary products increased by 17% and represent a third of the total export basket of the region. Such an increase benefits exporters of primary products, but also has a negative impact in Central American economies that are net importers of food products.
