<sup>a</sup> The net resource transfer is calculated as total net capital income minus the income balance (net payments of profits and interest). Total net capital income is the balance on the capital and financial accounts plus errors and omissions, plus loans and the use of International Monetary Fund credit plus exceptional financing. Negative figures indicate resources transferred outside the country.

<sup>a</sup> Annual averages. A country's overall real effective exchange rate index is calculated by weighting its real bilateral exchange rate indices with each of its trading partners by each partner's share in the country's total trade flows in terms of exports and imports. The extraregional real effective exchange rate index excludes trade with other Latin American and Caribbean countries. A currency depreciates in real effective terms when this index rises and appreciates when it falls.

<sup>b</sup> Preliminary figures, weighted by trade in 2009.

<sup>c</sup> January–October average.

<sup>d</sup> Simple average of the extraregional real effective exchange rate for 20 countries.

<sup>e</sup> Preliminary figures. Yearly calculation by ECLAC, based on consumer price data and nominal exchange rates provided by the National Statistical Office of Cuba.
