ECONOMIC COMMISSION FOR LATIN AMERICA

Office for the Caribbean

ALPHABETICAL INDEX

to the

ECCM TARIFF

F. K. Liebich

UN Regional Adviser on Trade Policy
& Integration

The term ECCM Tariff is used for the full title "Common External Tariff for the East Caribbean Market".

ALPHABETICAL INDEX TO THE ECCM TARIFF

This Index, which has no legal force, is meant to assist the user of the ECCM Tariff in finding the appropriate place in which the selected goods of the description concerned are most likely to be classified.

The Index should lead the user in each case at least to the most appropriate Tariff Chapter in which the goods of interest to him are classified. To bring out this aspect of the Index most items (or group of items) mentioned in the Chapter Headings of the Tariff are listed specifically and underlined. It is, of course in each of these cases necessary (as in any other case where reference is only made to a Tariff Chapter) that the user of the Index attributes the individual product to the relevant Tariff Number.

In most instances, however, the Alphabetical Index links the items directly with a Tariff Number. It shall be mentioned that, apart from the great majority of cases where the items in question are mentioned in the Tariff Number itself, the Items are attributed to a Number in conformity with the Explanatory Notes and the Alphabetical Index issued by the Brussels Customs Co-Operation Council. Due to the legal importance of this distinction the latter type of items are marked with an Asterisk.

The final attribution of any imported article to a Tariff Number depends on numerous technological and legal factors which may very well require a different classification in an individual case. The user of this Tariff should, in particular be warned that, due to the fact that the Index consists of selected items, the items do not as in the Tariff itself comprise the whole trade, nor are the selected sub-items necessarily the whole of a main item. For all these reasons the Alphabetical Index, apart from the fact that it has no legal force, should also not be regarded as a substitute of the Tariff (or any legal interpretation) but only as an instrument for its easier application.
