KEY FOR CONVERTING
from the
ECCM (BTN BASED) TARIFF CODE
to the
STANDARD ECCM TRADE CLASSIFICATION

900024745 - BIBLIOTECA CEPAL

Explanatory Note

The States members of the East Caribbean Common Market (ECCM) have decided to adopt a common external tariff based on the Brussels Tariff Nomenclature (BTN). The new tariff is to be introduced during 1972. At the same time an attempt is being made to achieve uniform statistical classification for trade data. As several of the ECCM States use the SITC (Original) classification for statistical purposes, two problems have to be solved: (i) the transference from SITC (Original) to SITC (Revised); (ii) the provision of a basis for comparison bearing in mind the lack of comparability between the BTN and the SITC (Original).

This document, as the title suggests, links the ECCM BTN-based tariff with a "Standard ECCM Trade Statistics Classification" (SETC) which is based on the SITC (Revised). To achieve this the BTN item numbers and descriptions have been sub-divided to the level of detail sub-items of interest to the ECCM States, and the SITC(R) codes have been expanded to get one-to-one correspondence at this detailed level.

The ordering of columns (1) and (2), is that of the proposed tariff classification. It should therefore be borne in mind that some revisions in detail may be necessary and should be made when the printed tariff becomes available.

Column (3) of the document presents the new detailed trade statistics classification and is "Standard" since it will be identical for all the ECCM States. It will be noted that the codes listed here are SITC (Revised) ^{1/} up to the 4 and 5 digit levels, with expansions as are required for statistical purposes. Those 5-digit codes that are expansions of the 4-digit sub-groups, are identifiable by a period (full-stop) after the 4th digit. All codes of more than 5 digits are expansions necessitated by

^{1/} Standard International Trade Classification, Revised, Statistical Papers, Series M. No. 34, United Nations, New York, 1961.

detailed sub-divisions. In other words, all expanded SITC codes include two periods (full-stops). For example, on page 2, the code number 011.1 is an SITC (Revised) code and so is 011.89; but 011.2.1 is an expansion of SITC (Revised) code 011.2, and 011.81.1 an expansion of SITC (Revised) code 011.81.

Column (4) shows related codes of the existing St. Lucia classification based on the SITC (Original), which has been used as an example for the purpose of this exercise. "Combination" here means that the sub-divided codes below this word do not together constitute one item or sub-item of the St. Lucia code. "EX" before code numbers indicate that the description in Column (2) relates to part only of the item or sub-item of the St. Lucia classification, and that the item or sub-item occurs elsewhere.

It will be necessary for each territory to do a similar exercise so as to construct a relationship between their existing statistical classification and the SITC (Revised).
