AND CO-OPERATION COMMITTEE)

AGRICULTURAL STATISTICS
OF THE
CARIBBEAN COUNTRIES
(With a Special Section for the CDCC)

Assembled by
Louis L. Smith
Agricultural Economics Officer
and
Radcliffe Dookie
Research Assistant

P R E F A C E

This publication is the second of a biennial series of consolidated agricultural statistics instituted by the ECLA Office for the Caribbean. The series was conceived as an instrument to facilitate the analysis of structural changes, and of past, recent and present performance of agriculture, the largest economic sector in almost all the countries and territories of the Caribbean. Judging by the numerous requests for copies of the first issue that we were unable to satisfy, it would seem that the series already enjoy wide acceptance in the region.

The present issue does not pretend to be completely exhaustive. It attempts to organise and synthesize the available information - both structural and current - taking account that some of the information are partial, and that there are different levels of accuracy. A great deal of effort still remains to be made by many countries and territories of the region, to fill the gaps in the range of data, and to improve the reliability of their statistics so as to better satisfy their own urgent needs for sound and reliable data for the formulation and implementation, of agriculture sector policies.

This Office is appreciative of the efforts of many Heads of statistical organizations in the region, and of Chief Agricultural Officers in the Ministries of Agriculture, for their special contributions.

S. St. A. Clarke

INTRODUCTION

This second issue of "Agricultural Statistics of the Caribbean Countries" is a revised, updated and amplified version of the first publication released in August 1974. In the meantime important events have taken place in the Caribbean - especially within the integration movement - which, it is hoped, would affect favourably the development of agricultural statistics in the foreseeable future.

First of all, a number of territories were already in the process of tabulating and publishing their recent agricultural census results. As a consequence, new data on basic agrarian structures were made available for Jamaica (1968/69 census), Montserrat (1972) and St. Lucia (1973/74). Secondly, after renewed appeal on the part of the CARICOM Standing Committee of Agricultural Planners and Ministers responsible for Agriculture, on the urgent need for agricultural statistics for purposes of planning and programming agricultural production and trade, and resolutions passed in CARICOM on the matter, member States or Territories like Grenada and Dominica have established Units of Agricultural Statistics within their relevant Ministries. Finally, an event which would have far-reaching consequences is the recent creation of the Caribbean Development and Co-operation Committee (CDCC) by ECLA Resolution 398 XVI (May 1975). In its work programme approved by the countries members of the CDCC at its first session in Havana, Cuba (November 1975) great emphasis is placed, within the framework of mutual technical co-operation among the Caribbean countries, on programmes to eliminate deficiencies in data gathering and distribution and the improvement of statistical systems in different fields.

Consequently, the scope of this new publication has been enlarged to include for the first time series on fishery statistics and aggregates for the CDCC countries as a whole, in separate sections. Moreover, improvements have been achieved in the presentation of the information. An effort was made to present data originating directly from the official sources in CARICOM member countries, having recourse to FAO publications only whenever direct country official estimates are not available.

Also, though most of the countries have adopted or are in the process of adopting the metric system, consideration has been given to the slow process of acceptance by the public in providing, at the beginning and at the end of the series, averages in both the metric system and on non metric terms for ease of comparison. Finally, the main sections of the publications are illustrated with graphs.

No information on prices are included here, although some data, mainly at the wholesale level, exist in most of the countries or territories of the sub-region. Unfortunately they are not systematically gathered and published generally. Besides, their nature and scope are statistically difficult to assess in most of the countries. It is expected that the countries of the area will assign high priority to agricultural statistics as one of the requisites in the development of policies for the furtherance of trade in agricultural products within the framework of integration among CARICOM member countries and at the wider level of the CDCC as a whole.

III

EXPLANATORY NOTES

SYMBOLS

Definitions of symbols used in the tables:

- None, in negligible quantity (less than one half of the unit indicated) or entry not applicable.
- ... Data not available.
- F FAO estimate.
- * Unofficial FAO estimate.
- P Provisional.
- E ECLA's Office for the Caribbean estimate.
- MT Metric Tons.
- LT Long Tons.
- Ha(s) Hectare(s).
- Kg(s) Kilogram(s).
- No. Number.
- Kg/Ha Kilogram per Hectare.
- Kg/Acre Kilogram per Acre.

CROP AREAS

Figures for crop areas generally refer to harvested areas.

YIELDS PER HECTARE

Yields per hectare are derived from detailed production and area data. For CARICOM countries the data on production and area are in most cases country data but in the case of non staple crops FAO area data were used in the absence of country data. Yields per hectare for the ECCM, LDC's and MDC's and CARICOM are weighted averages derived from totals of production and area for each group.

AVERAGES

In general the tables present a series of 10 individual years (1965 - 1974) in metric tons preceded by a five-year average (1961 - 1965) and followed by a three-year average (1972 - 1974).

IV

Both averages are shown here in metric and British terms. The 1961 - 1965 metric averages were taken from FAO Production Yearbook 1974 and Fishery data supplied by the Western Central Atlantic Fishery Commission.

The three-year averages (1972 - 1974) were computed from data whether official, unofficial or FAO estimates.

TOTALS

Any sub-total or total in this publication is the sum of available information. Effort has been made to obtain as complete a coverage as practicable, but there are a number of tables where, because of the paucity of information from the countries, the geographical coverage could not be completed.

In a few instances totals were not shown because of the unavailability of data of the main producer in the region.

TABLES

There was an attempt to show similar tables for the CARICOM group and the other Caribbean, but because of the absence of data some tables were not included. The tables on "Tenure of Lands in Farms" and "Mutton Production" were excluded from the Other Caribbean.

CONVERSION FACTORS

AREA

- 1 hectare (ha) = 2.47109 acres
- 1 sq. kilometre (km²) = 0.38610 sq. mile
- 1 sq. kilometre (km²) = 100 hectares (has)
- 1 acre = 0.4047 hectares (has)
- 1 sq. mile = 2.5900 sq. kilometres
- 1 sq. mile = 640 acres or
259 hectares (has)

WEIGHT

- 1 kilogramme (kg) = 2.20462 pounds (lbs)
- 1 Metric Ton (M.T.) = 0.98421 long tons (LT)
= 1.10231 short tons (ST)
- 1 Metric Ton = 1000 kilograms (kgs)
- 1 Metric quintal = 100 kilograms (kgs)

100 kilogram/hectare = 89.214 lbs per acre

100 kilogram/hectare = 405 kgs/acre

1 pound (lb) = 0.4536 kilogram (kg)

1 long ton = 1.01605 metric ton

1 short ton = 0.90718 metric ton

1 long ton = 2,240 pounds

1 short ton = 2000 pounds

TECHNICAL CONVERSION FACTORS

CITRUS

BELIZE: 1 box oranges = 90 lbs (net)

1 box grapefruits = 80 lbs (net)

JAMAICA: Sweet oranges = 1 box = 38.50 kgs

Grapefruits = 1 box = 31.70 kgs

Limes = 1 box = 9.10 kgs

Tangerines = 1 box = 29.50 kgs

COTTON: 1 bale cotton = 227 kg (gross); 218 kg (net)

WHOLE MILK

1 Imperial gallon whole milk = 4.70 kg

EGGS

Average weight of 100 hen eggs

Trinidad and Tobago = 5.00 kgs

Jamaica = 5.24 kgs

Other Caribbean = 5.12 kg

CURRENCY CONVERSION RATIO

Conversion factors used in this bulletin were:

JAMAICA: 1961-1965 J\$ 1.00 = EC\$ 4.80

1969-1972 J\$ 1.00 = EC\$ 2.40

1973-1974 J\$ 1.00 = EC\$ 2.1746

GUYANA: 1961-1971 G\$ 1.00 = EC\$ 1.00

1972-1974 G\$ 1.00 = EC\$ 0.92105

CURRENCY CONVERSION RATIO (CONTINUED)

BELIZE: 1961-1974 Bze\$1.00 = EC\$ 1.20

DOM. REP.: Pso (Peso)1.00 = US\$ 1.00

CUBA: Pso (Peso)1.00 = US\$ 1.00

HAITI: 5 Gourdes = US\$ 1.00

EC Currency Exchange Rates to the US Dollar

1960-1965 US\$ 1.00 = EC\$ 1.71

1966-1973 US\$ 1.00 = EC\$ 2.00

1960-1965 EC\$ 1.00 = US\$ 0.58;

1966-1973 EC\$ 1.00 = US\$ 0.50

All other Commonwealth Caribbean Territories carry an equal parity conversion ratio with the Eastern Caribbean Dollar.

NB: Guyana figures for 1972 and 1973 and Jamaica figures for 1973 are not quite comparable to earlier years because of the devaluation of their currencies in terms of the Eastern Caribbean (EC) Dollar.

1/ 'By 'global social product' is meant the value of all goods and productive services generated in the country in the course of the year. It is equal to the sum of the value of gross production of all productive sectors.

"The global social product is determined in Cuba according to the 'system of material production' accepted by the Statistical Office of the United Nations...This indication does not include the value of services such as financial, housing, personal and professional, public health, education, public administration, defense and other similar ones classed as consumption in Cuban methodology..."

2/ Conversion: Peso, Pso1.00=US\$1.00; US\$1.00=EC\$2.00 for 1970-1974.
