PREFACE

In the period 1984-1988, a series of national studies were conducted within the framework of a subregional project entitled "Women in Development Planning" and implemented by the United Nations Economic Commission for Latin America and the Caribbean (ECLAC), Subregional Headquarters for the Caribbean, with financial resources provided by the United Nations Development Fund for Women (UNIFEM).

While the project was ongoing and also after its termination, suggestions and requests for a comparative overview of the data provided in the separate country-level documents have been made to the ECLAC Women and Development Programme on a continuous basis by users, beneficiaries and interested organizations both within and outside the subregion. Suggestions to such effect have also been made at various conferences and meetings of United Nations organizations and other international and regional institutions.

In an attempt to fulfil this need, the present document has been prepared. It has extracted major parameters in social, economic, demographic and legal areas and presents relevant data in a comparative perspective. The data are primarily based on the findings of the above-mentioned project, particularly with regard to the published documents of national studies on women as recipients of services from resources allocated in the national budget.

In view of the length of time between the publication of each national study and the preparation of the present overview, efforts have been made to update some of the information and fill gaps wherever possible.

A word of gratitude is extended to Ms. Clara Báez, Ms. Myrtle Bishop, Mrs. Joaquín St. Cyr and Ms. Leslie Wade, who were involved in the preparation of individual country studies and have voluntarily assisted in the preparation of the present document through their valuable comments on earlier drafts.

It is hoped that the document will be useful for the intended purposes as well as for those which users and beneficiaries wish to attach to it.

INTRODUCTION

Over the past decade the status of women in the Caribbean has been described in qualitative terms from many perspectives. However, few attempts have been made to analyse the findings against hard data, accessible from official records, which indicate the allocation of government resources for the well-being of the population.

Within the framework of a research project on Women in Development Planning, which has been implemented by the United Nations Economic Commission for Latin America and the Caribbean (ECLAC) Subregional Headquarters for the Caribbean, a series of national studies have been conducted for the purpose of documenting and analysing the degree of equity in the distribution of social services between the sexes.

The main objective of the national studies was to provide data on women with respect to their participation in planning and as beneficiaries of government social services. To this effect, data disaggregated by sex has been collected and examined on population structure, labour force participation, educational levels, health levels and social welfare.

The national budget, including sectoral budgets and the census, has been selected as the fundamental source for the exercise. In examining public sector expenditure allocated in national budgets, together with services explicitly earmarked for women, an analysis has been made of the status of women as recipients of services for which resources have been allocated and earmarked for the whole population.

Considering the importance of situations determined by law, a review of the legal provisions pertaining to issues which are of particular relevance to women has also been undertaken. As a result, albeit limited specific information on the legal status of women has been provided.

This document presents a comparative overview and a summarized compilation of quantitative data, mainly extracted from the national studies carried out in seven Caribbean countries, namely Dominica, the Dominican Republic, Jamaica, Saint Kitts and Nevis,

Saint Lucia, Saint Vincent and the Grenadines and Trinidad and Tobago.

Some information which was not available at the time of the national surveys has been included in the present tabular presentation. Similarly, it has been possible, in some cases, to update the information which had appeared in national studies published earlier. While the "not stated" (n.s.) level may be high, the relevant indicators/parameters have been maintained because of their relevance for future inclusion in data collection.

Although data on particular indicators/parameters are not applicable for all countries for the same years --since different years may have been used in the official national records-- an effort has been made to introduce revisions to the data of the national studies in order to make the data more comparable.

In some instances the data relevant to certain countries do not completely cover the indicators/parameters used in the tabular presentation, as the data available in the respective country have been collected for the national records according to slightly different listings of categories. Such is the case, for example, of the Dominican Republic with regard to the indicator under item 4(d), which refers to women who have access to State farms/lands owing to the death or desertion of their husbands --since women would not otherwise have direct access to public lands--, and item 12(b), which refers to the proportion of female heads of households who received housing in specific cases.¹

The tabular presentation of the comparative status of women is intended to offer an instrument which can assist governments in their efforts to plan and meet the needs and demands of the female population.

A bibliography is attached.

¹ The data refer to housing in four public construction projects of the "Instituto Nacional de la Vivienda"; see María Gaton and Carmen Gómez Carrasco, "Adequate shelter: a right exercised with difficulty by the women head of households", INSTRAW-INVI-Habitat panel on women and shelter, Santo Domingo, 1987.
