Precio: 3.50 (EE.UU.)
(o su equivalente en la moneda del país)

Price: US$ 3.50
(or equivalent in other currencies)
Este número del Boletín incluye los datos llegados a la Secretaría de la CEPAL hasta el 31 de agosto de 1967.

This issue of the Bulletin includes data received by the ECLA secretariat up to 31 August 1967.

SIMBOLOS EMPLEADOS

Tres puntos (...) indican que los datos faltan o no constan por separado.
La raya (-) indica que la cantidad es nula o mínima.
El punto (.) se usa para indicar decimales.
Un espacio se usa para separar los millares y los millones (3 123 425).
Un asterisco (*) se utiliza para indicar cifras parcial o totalmente estimadas.
El uso de un guión entre fechas de años (1958-62) indica un promedio del período completo de años civiles que cubre e incluye los años inicial y final.
El término "toneladas" se refiere a toneladas métricas, y "dólares" al dólar de los Estados Unidos, a no ser que se indique otra cosa.
Debido a que a veces se redondean las cifras, los datos parciales y los porcentajes presentados en los cuadros no suman siempre el total correspondiente.

EXPLANATION OF SYMBOLS

Three dots (...) indicate that data are not available or are not separately reported.
A dash (-) indicates that the amount is nil or negligible.
A full stop (.) is used to indicate a decimal point.
A space is used to separate thousands and millions (3 123 425).
An asterisk (*) is used to indicate partially estimated figures.
The use of a hyphen between years (1958-62) indicates an average for the full period of calendar years covered, including both the first and last year.
"Tons" and "dollars" are metric tons and United States dollars respectively, unless otherwise stated.
Minor discrepancies in totals and percentages are due to rounding.

**General index:**

| Índice general | 42.7 | 78.0 | 75.3 | 89.8 | 79.6 | 97.3 | 100.0| 104.5| 83.2 | 99.7 |

**Table notes:**
- The table presents the volume of manufacturing production indices for various countries and industries from 1950 to 1966.
- The indices are calculated with 1963 as the base year (100).
- The major group categories include food, beverages, tobacco, textiles, wood, furniture, paper and paper products, printing and publishing, leather, rubber products, chemical products, non-metallic mineral products, basic metals, metal products, electrical machinery, transport equipment, and other manufacturing.
- The indices reflect changes in the volume of production over the years.

Nota: Debido a las aproximaciones, los totales no siempre coinciden con los datos parciales.

a/ Buques marítimos y fluviales de 500 o más toneladas de registro bruto.
b/ Incluye graneles.
c/ Incluye buques de pasajeros.
d/ No incluye Costa Rica, Honduras y Panamá.

TRB = Tonelaje registro bruto (≈ 2.83 m³).
TPB = Tonelaje de porte bruto (≈ 1 015 kg).

COMERCIO INTERNACIONAL

Elaboraciones efectuadas en la CEPAL a base de los datos enviados por los países a la Secretaría de la ALALC.
NOTAS EXPLICATIVAS

ALGUNOS INDICADORES ECONOMICOS

En los cuadros 1 se presenta un resumen de los principales indicadores recopilados. La cobertura geográfica no es siempre la misma para todas las series. Con excepción de los indicadores mencionados a continuación, las cifras se tomaron de los cuadros correspondientes de este Boletín.

Producto interno bruto. Los índices se obtuvieron a base de los valores en dólares a precios de 1960 del producto interno bruto al costo de factores. Tanto los índices sectoriales como los globales se refieren a estimaciones aproximadas basadas en la información disponible para los países de América Latina excepto Cuba.

Comercio con los Estados Unidos y Europa: Las cifras se basan en estadísticas de los Estados Unidos y los países europeos. En el caso de las importaciones de los países europeos (que aparecen en el cuadro (conclusión) bajo el título "Exportaciones a Europa occidental") los valores c.i.f. se convirtieron a una base f.o.b. aproximada suponiendo que los gastos por concepto de flete y seguro representan 15 por ciento de ese valor.

Consumo aparente de cemento y acero laminado: Las series comprenden sólo las veinte repúblicas latinoamericanas. Se entiende por consumo aparente la suma de la producción y la importación menos la exportación.

RESERVAS TOTALES Y RESERVAS DE DIVISAS

En los cuadros 3, los datos de Brasil antes de 1962 incluyen divisas a plazo, valores en cobranza y créditos extranjeros no usados.

BALANCE DE PAGOS CON LOS ESTADOS UNIDOS

Las cifras excluyen las transferencias militares.

EXPLANATORY NOTES

SELECTED ECONOMIC INDICATORS

Tables 1 present in summary form the basic statistical indicators. The geographical coverage is not always the same for all the series. Except for the indicators referred to below, the figures were taken from the relevant tables in this Bulletin.

Gross domestic product: Indexes were obtained of the gross domestic product at factor cost on the basis of dollars at 1960 prices. Both the sectoral and overall indexes represent rough estimates based on the data available for the Latin American countries with the exception of Cuba.

Trade with the United States and Europe: The figures are based on statistics of the United States and European countries. With respect to imports by the European countries (shown in table 1 (conclusion) under the heading "exports to Western Europe"), the c.i.f. figures were converted on an approximate f.o.b. level with freight and insurance assumed to represent 15 per cent of the c.i.f. value.

Apparent consumption of cement and finished steel: The series relate only to the twenty Latin American republics. Apparent consumption is understood to mean the sum of production plus imports less exports.

TOTAL AND FOREIGN EXCHANGE RESERVES

In tables 3, data for Brazil before 1962 include forward exchange, collection items and unused foreign lines of credit.

BALANCE OF PAYMENTS WITH THE UNITED STATES

Figures exclude military transfers.
El área denominada América Latina comprende en el período 1960-64 las veinte repúblicas, más la Organización de los Estados Americanos, la Organización Panamericana de la Salud y el Banco Interamericano de Desarrollo. Por otra parte, los Estados Unidos incluyen Alaska, Hawaii y Puerto Rico.

A partir de 1965, América Latina incluye también otros países y territorios del hemisferio occidental.

### INDICES DE PRECIOS DE LOS PRINCIPALES PRODUCTOS DE EXPORTACION EN EL MERCADO MUNDIAL

Aunque los precios deberían corresponder a las cotizaciones f.o.b. de los productos latinoamericanos en los principales lugares de exportación o en los principales mercados de los países importadores, esto no fue siempre posible. Para algunos productos, los precios se dan sobre la base c.i.f. pese a que los ingresos por concepto de flete en general no los percibe el país exportador. En unos pocos casos se tomaron productos cuyas especificaciones no corresponden estrictamente al producto latinoamericano porque no existen series estadísticas para este último.

Para la especificaciones básicas de los productos incluidos en el cuadro, véase el Boletín Estadístico de América Latina, Vol. III, N.º 2, con excepción de los siguientes productos que han sufrido modificaciones o que se introducen en este número:

**Azúcar**: Se usaron dos series:

a) Precio de exportación f.o.b. para entrega inmediata en Nueva York, cotización para las exportaciones a todo el mundo, menos a los Estados Unidos: en bruto, centrífuga, 96°; anterior a 1961, f.a.s. Cuba; a comienzos de 1961, f.o.b. puesta en el barco del comprador o en almacén portuario en alguno de los 12 "país aceptados" (por ejemplo, la República Dominicana, el Perú, China-Taiwan), ajustado a los precios de la región del Caribe.

**Bananos**: República Federal de Alemania, precio pagado por los mayoristas a los importadores de Hamburgo; bananas del Ecuador, en cajas.

### PRICE INDEXES OF THE MAIN EXPORT PRODUCTS ON THE WORLD MARKET

Though the prices should refer to f.o.b. quotations for Latin American products at main places of export or the main markets of importing countries, this was not always possible. For some products, the prices are given on a c.i.f. basis even though receipts under the head of freight are not generally earned by the exporting country. In a few minor cases specifications not strictly corresponding to the Latin American product were used because of lack of statistical series for the latter.

For the basic specification of products included in the table, see Statistical Bulletin for Latin America, Vol. III, N.º 2, with the exception of the following items, which have changed or are introduced in this number:

**Sugar**: Two series were used:

(a) Export prices f.o.b., spot New York quotation for exports to world except U.S.A., raw, centrífugal, 96°; prior to 1961, f.a.s. Cuba; beginning 1961, f.o.b. stowed purchaser's ship or port warehouse in any of the twelve "admitted countries" (for example, the Dominican Republic, Peru, China (Taiwan), adjusted to Caribbean area prices.

**Bananas**: Federal Republic of Germany, price paid by wholesale dealers to importers in Hamburg; bananas from Ecuador, in boxes.
Tabaco: Rodesia del Sur y Zambia, precio de remates.

Carne de vacuno: Reino Unido, precio interno, importación en Londres, c.i.f. cuartos traseros enfriados, de la Argentina.

Cuerpos vacunos: Reino Unido, cueros tipo frigorífico, de Argentina, incluidos costos y flete, en puerto.

Harina de pescado: Estados Unidos, en sacos de 100 libras, 60% de proteína, cotizaciones en Nueva York, f.o.b., fábricas costa oriental.

Lana: Se usaron dos series:

a) Precio de importación en bodega de aduana en Boston, base lana limpia, Montevideo, Super O's (58's - 50's).

b) Precio de importación en bodega de aduana en Boston, base lana limpia, Buenos Aires 5/6's (40/36's).

Cobre: Para 1966 y 1967 se usaron los precios fijados por el Gobierno de Chile.

Mineral de hierro: Estados Unidos, valor unitario de las importaciones desde Venezuela, 64 por ciento de contenido fino, f.o.b. Venezuela.

Respecto a las ponderaciones, son válidas las notas del Boletín anterior. Sin embargo, las ponderaciones se basaron en la participación de cada producto en el valor medio de las exportaciones latinoamericanas de 1961-63. Asimismo, con respecto al petróleo crudo y derivados, la ponderación no se indica por separado para estos productos por falta de información.

INDICES DEL VOLUMEN DE LA PRODUCCION

6.2 Indices de Volumen de la producción minera

El valor bruto de la producción se calculó con base en los precios o valores unitarios que a continuación se detallan:

Azufre, valor unitario de las exportaciones de México.

Salitre, valor unitario de las exportaciones de Chile.

Petróleo, precio promedio de realización del petróleo de Venezuela.

Manganeso, valor unitario de las exportaciones de Brasil.

Estano, valor unitario de las exportaciones de Bolivia.

Tobacco: Southern Rhodesia and Zambia, auction price.

Beef: United Kingdom, domestic/import price c.i.f. at London, Argentine chilled hinds.

Cattle hides: United Kingdom, Argentine hides frigorific type, including cost and freight at port.

Fish meal: United States, in bags of 100 lbs., 60 per cent protein, quotations f.o.b. New York, East coast plants.

Wool: Two series were used:

(a) Import price in bond Boston, clean basis, Montevideo, super O's (58's - 50's).

(b) Import price in bond Boston, clean basis, Buenos Aires 5/6's (40/36's).

Copper: For 1966 and 1967, the prices established by the Government of Chile have been used.

Iron ore: United States, unit value of imports from Venezuela, 64 per cent mineral content, f.o.b. Venezuela.

With respect to weighting, the notes in the previous number of the Bulletin hold good. However, the weights were based on the share of each commodity in the average Latin American export value in 1961-63. Weights for crude petroleum and petroleum products are not indicated separately owing to lack of data.

QUANTUM INDEXES OF PRODUCTION

6.2 Quantum indexes of mining production

The gross value of production was calculated on the basis of prices or unit values detailed as follows:

Sulphur, unit value of exports from Mexico.

Nitrate, unit value of exports from Chile.

Petroleum, average sales price of petroleum in Venezuela.

Manganese, unit value of exports from Brazil.

Tin, unit value of exports from Bolivia.
Cobre, valor unitario promedio de las exportaciones de Chile, México y Perú.

Plomo, valor unitario promedio de las exportaciones de México y Perú.

Hierro, valor unitario promedio de las exportaciones de Brasil, Chile, Perú y Venezuela.

Zinc, valor unitario promedio de las importaciones de USA desde México y Perú.

Bauxita, valor unitario promedio de las importaciones de USA desde Guyana, Jamaica y Surinam.

Oro y Plata, precio internacional.

Carbón, precio promedio de producción de Argentina, Brasil, Chile, Colombia y México.

6.3 Indices del volumen de la producción manufacturera

Las series nacionales de Argentina, Bolivia, Brasil, Colombia, Chile, El Salvador, Guatemala, México, Nicaragua, Panamá, Paraguay, Perú, República Dominicana, Uruguay y Venezuela se redujeron a la base común 1963. Para obtener el índice regional por agrupación, se ponderaron los índices nacionales por el valor agregado en 1958 de cada agrupación de cada país.

Las agrupaciones correspondientes a "Madera y Muebles", "Imprentas y editoriales" y "Diversas manufacturas" no se publican por carecerse de información de los países más importantes.

El índice total no es un promedio de las agrupaciones sino un promedio del total de la producción manufacturera de cada país.

POBLACION

Las series de población se presentan en dos cuadros: uno con cifras obtenidas de las últimas estimaciones oficiales publicadas o disponibles en la Oficina de Estadística de las Naciones Unidas (cuadro 7) y el otro con las proyecciones más recientes (cuadro 8).

Debido a que las fuentes son distintas, algunas veces los datos a la misma fecha, 1960, 1965, son diferentes. Estas diferencias se deben fundamentalmente a que la omission censal se calcula de diferente manera para las proyecciones y para las estimaciones oficiales.

Population

Population series are presented in two tables: one based on the figures obtained from the last official estimates published or available in the United Nations Statistical Office (Table 7) and the other on the most recent projections (Table 8).

Since different sources have been used, the figures for the same year (1960, 1965) do not always coincide. The differences are due principally to the fact that census omission has been calculated in a different way for projections and for official estimates.
Otra causa es que el crecimiento anual de la población, calculado a base de la natalidad, mortalidad y migración, fué estimado también con diferentes bases y métodos.

En el cuadro 8, en general, no se usa la migración para calcular el crecimiento natural con excepción de 5 países: Argentina, Bolivia, Paraguay, El Salvador y Honduras.

Las tasas de natalidad y mortalidad son, en la mayoría de los casos, las señaladas en el cuadro (1960-1965 y 1975-1980) con las siguientes excepciones:

<table>
<thead>
<tr>
<th>País</th>
<th>Primer período</th>
<th>Ultimo período</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bolivia</td>
<td>-</td>
<td>1970-1975</td>
</tr>
<tr>
<td>Paraguay</td>
<td>-</td>
<td>1965-1970</td>
</tr>
<tr>
<td>Guatemala</td>
<td>1965-1970</td>
<td>-</td>
</tr>
</tbody>
</table>

Los datos censales en los cuadros 28 al 30 se refieren generalmente a la población enumerada "de facto", con excepción de Argentina en 1947, Costa Rica, Cuba, Haití, México y Jamaica, cuyos datos corresponden a la población "de jure". En algunas oportunidades hay estimaciones acerca de la subenumeración censal información sobre población indígena excluida, así como los casos en que hay cédulas no tabuladas, lo que se detalla en el Boletín III Vol. 2.

Cuadro 28.- El concepto "ciudad" se refiere en algunos casos a divisiones administrativas, mientras que en otros a aglomeración urbana o área metropolitana; cuando fue posible, se indicó el criterio en nota de pie de página.

Generally speaking, the census data presented in tables 28 to 30 relate to the population enumerated de facto, except in the cases of Argentina (data for 1947), Costa Rica, Cuba, Haiti, Jamaica and Mexico, where the figures represent the de jure population. Estimates of under-enumeration are sometimes available, or data on indigenous population excluded from the statistics. There are also cases in which schedules have not been tabulated. Information on all these points is given in the Statistical Bulletin for Latin America, Vol. III, N° 2.

Table 28.- The term "city" in some cases signifies administrative divisions, and in others urban agglomerations or metropolitan areas. Wherever possible, the definition applicable is indicated in a footnote.
Cuadro 29. - Debido a los diferentes criterios para definir "localidad", el grupo "no clasificada" en algunos casos incluye toda la población rural y en otros sólo la población diseminada. Cuando no hay datos en el rubro mencionado significa que la totalidad de la población se clasificó en localidades.

Además se presentan los siguientes casos especiales:

Bolivia: estimación para las ciudades de La Paz y Sucre.

Paraguay: centros de municipios.

Cuba: núcleos urbanos de 1 000 habitantes y más.

Haití: centros de comunas.

Guyana: Georgetown, aglomeración urbana.

Trinidad y Tabago: ciudades, pueblos y alrededores.

Cuadro 30. - Se considera como "analfabeta" a la persona que no puede leer o escribir en ningún idioma; este término incluye a los semianalfabetos, o sea aquellos que sólo saben leer o escribir. En general no están comprendidas entre los analfabetos aquellas personas cuyo alfabetismo se ignora; las excepciones conocidas se indican en notas de pie de página.

Cuadro 31. - Los datos se basan en los registros de nacimientos. Ver la calidad del registro en el cuadro 9.

Las tasas se refieren a los nacimientos vivos de madres de una edad determinada con respecto a la población femenina de ese mismo grupo de edad. Se toman como límites de edad de la población femenina entre los 10 y los 49 años, que se consideran la población fértil; sin embargo en algunos nacimientos la edad de la madre está fuera de estos límites, pero estos casos constituyen una proporción muy pequeña. Los datos de población utilizados para el cálculo de las tasas corresponden a las estimaciones oficiales, aplicándoseles la distribución por edades del censo o proyección más cercana.

Cuadro 32. - Los datos se basan en los registros de defunciones. Ver la calidad del registro en el cuadro 10.

Los códigos corresponden a las siguientes causas de muerte, según la Lista Abreviada de 50 causas:

B 1 a 17 Enfermedades infecciosas y parasitarias.

B 18 y 19 Tumores malignos y benignos.
Lesiones vasculares del sistema nervioso central.

Enfermedades del corazón (excluyen las enfermedades hipertensivas no cardíacas).

Influenza y Neumonía.

Bronquitis.

Gastritis, duodenitis, enteritis, etc. (excluyen el resto de enfermedades del aparato digestivo).

Enfermedades de la primera infancia (incluyen malformaciones congénitas).

Accidentes, envenenamientos y violencias.

Para determinar las principales causas de muerte se seleccionaron las cinco primeras de cada país y se reunieron las enfermedades infecciosas y parasitarias en un solo grupo, aunque es necesario destacar que algunas de éstas, como coqueluche, sarampión y tuberculosis, constituyen por sí solas una de las principales causas de muerte en algunos países. Se excluyen en el cuadro las siguientes causas: B 20, 21, 23, 29, 33 al 35, 37 a 40, 45 y 46, que sólo están comprendidas en el total de defunciones.

Las tasas expresan la relación entre las defunciones por una causa determinada y la población total de cada país.

La fuente de la información básica sobre las cantidades producidas es la Organización de las Naciones Unidas para la Agricultura y la Alimentación (FAO). También para el cálculo de los índices de producción se adoptaron el método y los factores de ponderación de la FAO.

Con respecto a los índices de producción, se presentan por grupos de productos y se adoptó 1963 como año base, conservando como factores de ponderación los precios medios regionales del trigo en 1952-56.

Para mayores detalles respecto a las fuentes y métodos utilizados, véanse Anuario de Producción y Estadísticas Mundiales de Cultivos, de la FAO.
MINERIA

Indices del volumen de la producción minera

Las ponderaciones para el cálculo de los índices por países se obtuvieron valorando la producción bruta de cada país mediante los precios descritos en la nota del cuadro 6.2.

La cobertura se determinó siguiendo los siguientes criterios:

a) Se incluyeron todos los productos que forman parte del índice regional, y
b) Se incluyeron los productos que en 1963 representaron más de cinco por mil de la producción del país. De esta manera se obtuvo una cobertura superior a 90 por ciento.

MANUFACTURA

Indices del volumen de la producción

Los índices presentados en este cuadro fueron proporcionados por los países respectivos y sólo se les ha reducido a la base común de 1963.

CONSTRUCCION

Permisos de construcción

La información en este cuadro se refiere a los permisos de construcción solicitados y otorgados por las municipalidades de los distintos países. En el caso de los certificados de construcción terminada, la serie no tiene la misma cobertura que la anterior ya que terminada una construcción no siempre se solicita el certificado final.

Los datos correspondientes al conjunto del país se refieren, en todos los casos, a muestras que abarcan las divisiones político-administrativas más importantes, o las capitales de los municipios. Esas muestras se han modificado a través de los años, aumentando su cobertura.

La información relativa a Argentina, Brasil, Guatemala y México comprende tanto las construcciones nuevas como las ampliaciones e inclusive viviendas y edificios no residenciales, mientras que en Colombia, Costa Rica, Chile, El Salvador y el Perú se excluyen las ampliaciones.

MINING

Quantum indexes of mining production

The weights for preparing the country indexes were obtained by calculating each country's gross production on the basis of the prices given in the note to table 6.2.

Coverage was determined on the following criteria:

(a) All products on the regional index were included,
(b) All products that represented more than 0.5 per cent of domestic output in 1963 were included. In this way a coverage of over 90 per cent was obtained.

MANUFACTURING

Quantum indexes of manufacturing production

The indexes presented in this table were furnished by the respective countries and have been reduced to the common base year 1963.

CONSTRUCTION

Building permits

The information presented in this table relates to building permits requested and granted by the municipal authorities of the various countries. The series for certificates of completion does not have the same coverage as the series for permits, since the final certificate is not always applied for, when a building is completed.

The data for the country as a whole relate in all cases to sample surveys that cover the most important political and administrative divisions, or municipal centres. The sample surveys have been changed over the years to improve their coverage.

The information on Argentina, Brazil, Guatemala and Mexico covers new constructions and additions as well as housing and non-residential buildings; in Colombia, Costa Rica, El Salvador and Peru additions are excluded.
Cobertura
Los datos se refieren al intercambio de mercaderías excluidos el oro, las monedas de curso legal, el papel moneda y las mercaderías en tránsito directo. Debido a diferencias de cobertura, los valores en dólares pueden ser, en algunos casos, ligeramente distintos a los que publican los mismos países.

Matriz según el destino económico y por origen industrial, 1963
En los cuadros (39 a 43) según el destino económico la información se ha obtenido clasificando los datos nacionales utilizando el documento E/CN. 12/739 Clasificación del comercio exterior según uso o destino económico (CUODE), CEPAL, 1965.

La clasificación de los productos según la CIIU se ha efectuado utilizando la relación entre la clasificación Uniforme para el Comercio Internacional y la Clasificación Industrial Uniforme, Documento Informes Estadísticos, Serie M N° 43 Clasificación de las Mercaderías por la rama de actividad de que proceden, Naciones Unidas, Nueva York, 1966.

Por falta de espacio en la presentación de la Matriz se eliminó el grupo varios en la clasificación según uso o destino económico. En consecuencia, en algunas filas, la suma de las columnas puede no coincidir con el total dado que éste incluye el grupo varios.

Métodos y notas explicativas
Véase el Boletín Estadístico. Vol. III, N° 2 que contiene detalladas notas metodológicas y explicativas válidas también para los cuadros que se presentan en este número.

Coverage
Data refer to trade in merchandise, excluding gold, coins, paper currency, and goods in direct transit. Because of differences in coverage, values in dollars may in some cases differ slightly from those published by the countries themselves.

International trade matrix by economic use and industrial origin, 1963
In tables (39 to 43) by economic use, the information has been obtained by classifying national data on the basis of the ECLA document Clasificación del comercio exterior según uso o destino económico (CUODE), 1965 (E/CN.12/739).

For the classification of products according to ISIC, the relationship between the Standard International Trade Classification and the International Standard Industrial Classification has been used (United Nations Statistical Papers, Series M, N° 43, Classification of commodities by industrial origin, New York, 1966).

The "miscellaneous" group was omitted from the classification by economic use or destination for lack of space in the matrix. Consequently, in some rows, the sum of the columns may not always coincide with the total, in which the "miscellaneous" group has been included.

Methods and explanatory notes
See Statistical Bulletin, Vol. III, N° 2, which contains detailed methodological and explanatory notes that are also applicable to the tables presented in this number.
