En el presente Boletín Demográfico se presenta información para los 20 países que forman lo que denominamos América Latina, sobre la población económicamente activa para el total de cada país, las áreas urbana y rural, por sexo y grupos quinquenales de edades para el período 1970-2000, cada cinco años.

Para cada país se ha tomado como definición de población económicamente activa la utilizada en el último censo de población.

En el cuadro 1 se presenta la población total de los países que conforman América Latina como así mismo para los otros países y territorios de la región para el período 1950 y 2025.

Las tasas de actividad por sexo y grupos de edades y áreas urbana y rural para el año base

de las proyecciones, es decir, 1970, corresponden a las observadas en el último censo, con ajustes de menor importancia para obtener un comportamiento regular. Cuando la información se obtuvo de censos realizados en torno a 1970, se procedió a estimar las tasas para 1970, utilizando procedimientos de interpolación sencillos que tomaron en cuenta informaciones del censo precedente.

En las proyecciones de las tasas de actividad urbana y rural por sexo y grupos de edades se ha tomado en cuenta por una parte, su tendencia histórica y por otra la evolución más plausible que pueden seguir en el futuro teniendo en consideración el grado de urbanización alcanzado y las perspectivas de desarrollo agrícola industrial de cada país.

In this issue of the Boletín Demográfico information for the twenty Latin American countries on economically active population is presented for the total of each country, urban and rural areas, by sex and quinquennial age groups for the period 1970-2000, every five years.

The definition of economically active population for each country is the one that was used in the last population census.

Table 1 presents the total population for the twenty Latin American countries as well as for the other countries and territories of the region for the period 1950 to 2025.

The activity rates by sex and age groups and urban and rural areas for the base year of

In the projection of the urban and rural activity rates by sex and age groups, on the one hand, the historical tendency was considered and, on the other, their most plausible evolution in the future taking into account the urbanization degree reached and the agro-industrial development perspectives of each country.

the projections, that is, 1970, correspond to those in the last census, with adjustments of minor importance for obtaining a regular curve. When the information was obtained from censuses taken around the year 1970, rates were estimated for 1970 using simple procedures of interpolation which had in consideration information from the preceding census.

CUADRO 1: Los datos de población de los veinte países de América Latina en el período 1950-2025 proceden de proyecciones elaboradas en CELADE.

En la preparación de alguna de ellas se ha contado con la colaboración de instituciones nacionales, como sigue:

**Argentina:**

Revisión realizada en CELADE de la proyección elaborada por el Instituto Nacional de Estadística y Censos de Argentina (INDEC). Esta revisión se refiere exclusivamente a las hipótesis de evolución de la fecundidad a partir de 1975.

**Bolivia:**

Proyección elaborada por el Instituto Nacional de Estadística de Bolivia en colaboración con CELADE, 1979.

**Brasil:**

Las estimaciones de las variables demográficas del período 1950-1975 corresponden a las presentadas en el Seminario del Panel de Brasil organizado por el Comité de Población y Demografía de la Academia Nacional de Ciencias de los Estados Unidos y por la Asociación Brasileña de Estudios de Población (ABEP) en el mes de mayo de 1979. Las proyecciones desde 1975 al 2025 fueron elaboradas en CELADE.

**Colombia:**

Esta proyección fue elaborada en CELADE en consulta con el Departamento Administrativo Nacional de Estadística (DANE) en 1980.

**Costa Rica:**

La proyección se elaboró en colaboración con la Dirección General de Estadística y Censos (DGEC). Los resultados aparecen en la publicación 'Evaluación del censo de 1973 y proyección de la población por sexo y grupos de edades, 1950-2000'. República de Costa Rica, Dirección General de Estadística y Censos, Centro Latinoamericano de Demografía, junio 1976.

**Cuba:**

Proyección elaborada en 1980 por la Dirección de Demografía del Comité Estatal de Estadística de Cuba, en colaboración con CELADE.

**Chile:**

La proyección ha sido revisada en 1977 por la Oficina de Planificación Nacional (ODEPLAN) y el Instituto Nacional de Estadística (INE), en colaboración con CELADE.

**El Salvador:**

Elaborada en colaboración con las instituciones nacionales que se mencionan enseguida, sus resultados aparecen en la publicación 'La población de El Salvador por sexo y edad en el período 1950-2000. Principales indicadores demográficos'. República de El Salvador Consejo Nacional de Planificación y Coordinación Económica (CONAPLAN), Dirección General de Estadística y Censos (DIGESTIC), San Salvador, El Salvador, 1976. (Edición provisional).

**Guatemala:**

Proyección elaborada por la Dirección General de Estadística de Guatemala en colaboración con CELADE cuyos resultados aparecen publicados en, 'Guatemala: proyección de la población por sexo y grupos de edades, 1950-2000'. Juan Chackiel, Mario Isaacs, Dirección General de Estadística de Guatemala, Centro Latinoamericano de Demografía.

**México:**

Proyección elaborada en CELADE en consulta con el Consejo Nacional de Población en 1980.

**Panamá:**

Esta proyección fue elaborada por la Dirección de Estadística y Censo de Panamá en colaboración con CELADE en 1978.

**Paraguay:**

Revisión realizada en 1980 por CELADE en colaboración con la Secretaría Técnica de Planificación de Paraguay.

**Uruguay:**

Proyección elaborada por la Dirección General de Estadística y Censos en colaboración con CELADE, 1981.

**Venezuela:**

Proyección elaborada en CELADE en consulta con la Oficina Central de Estadística (OCEI) en 1980.

Las proyecciones de los restantes ocho países de América Latina se elaboraron en CELADE sin la participación directa de organismos nacionales de estos países.

Con respecto a los otros países y territorios del Caribe la información proviene de proyecciones de población elaboradas por la División de Población de las Naciones Unidas.

La denominada Zona del Canal de Panamá no ha sido incorporada aún en las proyecciones oficiales que se tienen para Panamá. Por esta razón se ha considerado la estimación hecha por la División de Población incluyéndose en la categoría de otros territorios.

Las cifras de población para los años calendarios de 1976 a 1979 y de 1981 a 1984 que se presentan en este cuadro, se obtuvieron por interpolación de los valores que para los años 0 y 5 aparecen en las proyecciones anteriormente citadas.

La población del período 1970-2025 corresponde a la proyección con una hipótesis de fecundidad media, o recomendada, de cada país.

CUADROS 2 al 26: En estos cuadros se incluyen para América Latina, las subregiones (Área Andina, Área Atlántica, América Central y Repúblicas del Caribe) y para cada uno de los 20 países en forma detallada:

- a) La proyección de la población económicamente activa total por sexo y grupos de edades para el período 1970-2000. Esta proyección se obtiene como suma de las proyecciones de la población económicamente activa urbana y rural.
- b) La proyección de la población económicamente activa urbana por sexo y grupos de edades para el período 1970-2000. Esta proyección resulta de aplicar las tasas de actividad urbana por sexo y grupos de edades proyectadas entre 1970 y 2000 a la proyección de la población urbana.
- c) La proyección de la población económicamente activa rural por sexo y grupos de edades para el período 1970-2000. Esta proyección resulta de aplicar las tasas de actividad rural por sexo y grupos de edades proyectadas entre 1970 y 2000 a la proyección de la población rural.
- d) Proyección de las tasas de actividad total según sexo y grupos de edades para el período 1970-2000 calculadas a partir de las proyecciones de población económicamente activa total del cuadro a) y las proyecciones de población total.
- e) Proyección de las tasas de actividad urbana por sexo y grupos de edades para el período 1970-2000. Para el caso de la población económicamente activa urbana masculina se adoptaron dos modelos límites de tasas de actividad por edad, hacia los cuales tenderían las tasas de

actividad urbana masculina por grupos de edades en el año 2030. Uno de los modelos corresponde a países de mayor desarrollo industrial, lo que implica, menor participación en edades menores a 20 años y mayores de 55 años. El otro modelo corresponde a países con desarrollo semi-industrial, cuya principal diferencia con el modelo anterior radica en la mayor participación en esos tramos de edades: menores de 20 años y mayores de 55 años. En los dos modelos límites las tasas de actividad adoptadas para el tramo 20-55 años en el año 2030 son iguales.

Para la proyección de las tasas de actividad urbana femenina se adoptaron para el año 2000 las tasas de actividad femeninas de las ciudades capitales.

Las tasas de actividad masculina y femeninas para los años que abarca la proyección se obtuvieron por interpolaciones lineales.

- f) Proyección de las tasas de actividad rural por sexo y grupos de edades para el período 1970-2000.

En el caso de la proyección de tasas de participación masculinas rurales, también se adoptaron dos modelos límites, adoptados siguiendo criterios similares a los considerados en el caso de la participación urbana.

Las tasas de actividad masculina rural de 1970 de cada país se mantuvieron constantes durante todo el período de la proyección en el tramo de edades entre 25 y 55 años. Para las tasas de las edades marginales, menos de 25 años y más de 55, como se dijo antes se tomaron en cuenta esos dos modelos límites.

Las tasas de actividad de mujeres rurales se proyectaron manteniendo constantes las tasas correspondientes a las edades comprendidas entre 20 y 65 años y bajando levemente las tasas en las edades marginales es decir menos de 20 y mayores de 65 años.

Esta metodología se aplicó para 17 países de América Latina. En los casos de Paraguay y Honduras se adoptaron las proyecciones de las tasas de actividad oficiales así como las cifras proyectadas de la población económicamente activa (urbana y rural) realizadas por organismos nacionales en colaboración con CELADE. Para Perú se adoptaron las tasas de actividad publicadas por la Oficina Nacional de Estadística.

En los cuadros d), c) y f) se incluyen además las tasas refinadas de actividades calculadas como cociente entre la población económicamente activa y la población global de 10 y más años correspondiente.

CUADRO 27: Se presentan en este cuadro las tasas brutas de actividad total, urbana y rural por sexo para el período 1970-2000 calculadas como cociente entre la población económicamente activa total, urbana o rural de un determinado sexo y la población global correspondiente.

## EXPLANATORY NOTES

---

TABLE 1: Population figures for the twenty countries of Latin America, for the period 1950-2025, were obtained from CELADE projections.

Some of the projections were prepared in collaboration with national institutions, as follows:

**Argentina:**

CELADE revision of the projection made by the Instituto Nacional de Estadística y Censos of Argentina (INDEC). This revision only refers to the fertility evolution hypotheses starting in 1975.

**Bolivia:**

Projection made by the Instituto Nacional de Estadística of Bolivia in collaboration with CELADE, 1979.

**Brazil:**

The estimated values of the demographic variables for the period 1950-1975 are those submitted to the Seminar of the Panel on Brazil organized by the Committee on Population and Demography of the United States National Academy of Sciences and by the Brazilian Association of Population studies (ABEP) in May 1979. The projections from 1975 to 2025 were prepared by CELADE.

**Colombia:**

This projection was made by CELADE in consultation with the Departamento Administrativo Nacional de Estadística (DANE) in 1980.

**Costa Rica:**

This projection was prepared in collaboration with the Dirección General de Estadística y Censos (DGEC). The results appear in the publication, *Evaluación del Censo de 1973 y Proyección de la población por sexo y grupos de edades, 1950-2000*. República de Costa Rica, Dirección General de Estadística y Censos, Latin American Demographic Centre, June, 1976.

**Cuba:**

Projection prepared in 1980 by the Dirección de Demografía del Comité Estatal de Estadísticas de Cuba, with the collaboration of the Latin American Demographic Centre (CELADE).

**Chile:**

The projection was revised in 1977 by the Oficina de Planificación Nacional (ODEPLAN) and the Instituto Nacional de Estadísticas (INE), in collaboration with CELADE.

**El Salvador:**

The projection was elaborated in collaboration with the national institutions mentioned below and the results appear in the publication, *La población de El Salvador por sexo y edad en el período 1950-2000. Principales indicadores demográficos*, República de El Salvador, Consejo Nacional de Planificación y Coordinación Económica (CONAPLAN), Dirección General de Estadística y Censos (DIGESTIC), San Salvador, El Salvador, 1976. (Provisional edition).

**Guatemala:**

Projection prepared by the Dirección General de Estadística de Guatemala, with CELADE's collaboration, the results being published in Guatemala, *Proyección de la población por sexo y grupos de edades, 1950-2000*. Juan Chackiel, Mario Isaacs, Dirección General de Estadística of Guatemala and CELADE.

**Mexico:**

Projection prepared by CELADE in consultation with the Consejo Nacional de Población in 1980.

**Panama:**

This projection was made by the Dirección de Estadística y Censo of Panama in collaboration with CELADE in 1978.

**Paraguay:**

Revisión made by CELADE in 1980 in collaboration with the Technical Planning Secretariat of Paraguay.

**Uruguay:**

Projection prepared by the Dirección General de Estadística y Censos in collaboration with CELADE, 1981.

**Venezuela:**

Projection prepared by CELADE in consultation with the Oficina Central de Estadística (OCEI) in 1980.

The projections for the other eight Latin American countries were elaborated by CELADE without the direct participation of national institutions from these countries.

With regard to the other countries and territories of the Caribbean, data have been derived from population projections elaborated by the United Nations Population Division.

The area known as the Panamá Canal Zone has not yet been incorporated into the official projections for Panama. For this reason the estimate elaborated by the Population Division is the one considered and has been included in the territory category.

Population figures for the calendar years 1976-1979 and 1981-1984 presented in this table were obtained by interpolating the values corresponding to years ended in digits 0 and 5 appearing in the projections mentioned above.

Population for the period 1970-2025 corresponds to the projection with a medium fertility hypothesis, or recommended hypothesis, for each country.

TABLES 2 to 26: In these tables the following detailed information is included for Latin America, the subregions (Andean Area, Atlantic Area, Central America and the Caribbean Republics) and for each of the twenty countries:

- a) Total economically active population projection by sex and age groups for the period 1970-2000. This projection is obtained by sum of the urban and rural economically active population projections.
- b) The urban economically active population projections by sex and age groups for the period 1970-2000. This projection results by applying the urban activity rates by sex and age groups projected between 1970 and 2000 to the urban population projection.
- c) The rural economically active population projection by sex and age groups for the period 1970-2000. This projection is the result of applying rural activity rates by sex and age groups projected between 1970 and 2000 to the rural population projection.
- d) Projection of the total activity rates by sex and age groups for the period 1970-2000 calculated starting from the total economically active population projections of table a) and the total population projections.

e) Projection of the urban activity rates by sex and age groups for the period 1970-2000. For the male urban economically active population two limit models of activity rates by ages were adopted, to which male urban activity rates by age groups would tend to in the year 2030. One of these models corresponds to countries with greater industrial development, which involves less participation of ages under 20 and over 55. The other model corresponds to countries with semi-industrial development, whose principal difference with the model described before is the greater participation in those age intervals: under 20 years and over 55. In both models the activity rates adopted for the ages between 20 and 55 in the year 2030 are the same.

For the projection of the female urban activity rates the female activity rates of the capital cities were adopted for the year 2000.

Both the female and male activity rates for the years covered by the projections were obtained by linear interpolation.

f) Projections of the rural activity rates by sex and age groups for the period 1970-2000.

In the case of the projection of male rural participation rates two limit models were also adopted, following similar criteria to those considered in the case of urban participation.

The rural male activity rates for 1970 for each country remained constant during all the period of the projection in the age interval 25 to 55. For the rates of marginal ages, under 25 and over 55, as mentioned above, these two limit models were taken into consideration.

The rural female activity rates were projected maintaining constant the corresponding rates to the age interval 20-65 and slightly reducing the rates for marginal ages, i.e. under 20 and over 65.

This methodology was applied to 17 countries of Latin America. In the cases of Paraguay and Honduras the official projections of the activity rates were adopted as well as the projected data for the economically active population (urban and rural) carried out by national institutions with the collaboration of CELADE. In the case of Peru the activity rates published by the Oficina Nacional de Estadística were adopted.

In tables d), c) and f) the refined activity rates calculated as quotient of the economically active population and the corresponding total population 10 years and over are also included.

TABLE 27: This table presents the gross total activity rates, urban and rural by sex for the period 1970-2000 calculated as quotient of the total economically active population, urban or rural of a specific sex and the corresponding total population.
