INTRODUCCION

El presente *Boletín Demográfico* tiene como principal objetivo mostrar un conjunto de tasas de fecundidad por edad y tasas globales de fecundidad para los 20 países de América Latina.

La variable fecundidad determina en gran medida los cambios en la estructura por edad y magnitud de una población. Su estudio constituye, en consecuencia, una preocupación constante en el campo de la demografía.

Los cambios, a través del tiempo, que puede experimentar la fecundidad no es posible anticiparlos con precisión: sus determinantes son complejos y actúan en forma interrelacionada. Es aconsejable, por lo tanto, formular supuestos alternativos de la variación futura de la fecundidad, de modo que se determine un rango de variación dentro del cual puedan quedar comprendidos los valores que realmente se presenten.

En el cuadro 2 se presentan, para cada país, tres hipó-

tesis de cambio de las tasas de fecundidad. Se denomina *hipótesis recomendada* a la hipótesis media que puede considerarse la de mayor plausibilidad.

En los cuadros 3 y 4 se dan a conocer las tasas brutas de natalidad y los nacimientos anuales, respectivamente, para cada quinquenio del período 1950-2000, derivados de las proyecciones de población de cada país y que corresponden a las distintas hipótesis de evolución de la fecundidad. Cabe señalar que las hipótesis alternativas de fecundidad se combinan, como es habitual, con una hipótesis única de evolución de la mortalidad y una de migración, en cada uno de los países.

Finalmente, al igual que en boletines anteriores, el cuadro 1 presenta la población estimada para cada uno de los países de la región desde 1920 hasta el año 2000, por años sucesivos para el período 1975-1985 y por intervalos de cinco años en los períodos 1920-1975 y 1985-2000.

INTRODUCTION

The main aim of this issue of the *Boletín Demográfico* is to present a set of age-specific fertility rates and the total fertility rates for 20 Latin American countries.

The fertility variable largely determines the changes in structure by age and magnitude of a population. Its study is therefore a constant concern in the field of demography.

The changes which fertility may experience in the course of time can not be anticipated with accuracy, since the determining factors are complex and are inter-related in their action. It is therefore advisable to formulate alternative hypotheses on the future variation in fertility which give a range of variation within which the values which actually occur are likely to be contained.

Table 2 presents three hypotheses of change in

fertility rates for each country. The middle hypothesis, which may be considered to be the most plausible, has been termed the *recommended hypothesis*.

Tables 3 and 4 give the crude birth rates and annual births respectively for each five-year period between 1950 and 2000, derived from the population projections for each country and corresponding to the different hypotheses of the evolution of fertility. It should be mentioned that the alternative fertility hypotheses are combined, as is usual, with a single hypothesis on the evolution of mortality and another for migration in each country.

Finally, as in previous *Bulletins*, table 1 indicates the estimated population for each of the countries of the region from 1920 to the year 2000, by successive years for the period 1975-1985 and by five-year intervals for the periods 1920-1975 and 1985-2000.

NOTAS EXPLICATIVAS

CUADRO 1: Las cifras del período 1920-1940 fueron derivadas de estimaciones que aparecen en las siguientes publicaciones:

- a) Naciones Unidas, *Demographic Yearbook*, Department of Economics and Social Affairs, Nueva York, 1952 y 1960.
- b) Naciones Unidas, "Perspectivas de la población mundial evaluadas en 1963", en *Estudios Demográficos* N° 41, ST/SOA/Serie A/41, Nueva York, 1967.

Los datos de población de los veinte países de América Latina en el período 1950-2000 proceden de proyecciones elaboradas recientemente en CELADE.

En la preparación de algunas de ellas se ha contado con la colaboración de instituciones nacionales, como sigue:

Argentina: Revisión realizada en CELADE de la proyección elaborada por el Instituto Nacional de Estadística y Censos de Argentina (INDEC). Esta revisión se refiere exclusivamente a las hipótesis de evolución de la fecundidad a partir de 1975.

Bolivia: Proyección elaborada por el Instituto Nacional de Estadística de Bolivia en colaboración con CELADE, 1979.

Brasil: Las estimaciones a las variables demográficas del período 1950-1975 corresponden a las presentadas en el Seminario del Panel de Brasil organizado por el Comité de Población y Demografía de la Academia Nacional de Ciencias de los Estados Unidos y por la Asociación Brasileña de Estudios de Población (ABEP) en el mes de mayo de 1979. Las proyecciones desde 1975 al 2000 fueron elaboradas en CELADE.

Costa Rica: La proyección se elaboró en colaboración con la Dirección General de Estadística y Censos (DGEC). Los resultados aparecen en la publicación *Evaluación del censo de 1973 y proyección de la población por sexo y grupos de edades, 1950-2000*. República de Costa Rica, Dirección General de Estadística y Censos, Centro Latinoamericano de Demografía. Junio 1976.

Cuba: Proyección elaborada en 1979 por la Dirección de

Demografía del Comité Estatal de Estadística de Cuba, en colaboración con CELADE.

Chile: La proyección ha sido revisada en 1977 por la Oficina de Planificación Nacional (ODEPLAN), y el Instituto Nacional de Estadística (INE), en colaboración con CELADE.

El Salvador: Elaborada en colaboración con las instituciones nacionales que se mencionan enseguida, sus resultados aparecen en la publicación *La población de El Salvador por sexo y edad en el período 1950-2000. Principales indicadores demográficos*. República de El Salvador, Consejo Nacional de Planificación y Coordinación Económica (CONAPLAN), Dirección General de Estadística y Censos (DIGESTIC), San Salvador, El Salvador, 1976. (Edición provisional).

Guatemala: Proyección elaborada por la Dirección General de Estadística de Guatemala en colaboración con CELADE cuyos resultados aparecen publicados en, *Guatemala: proyección de la población por sexo y grupos de edades, 1950-2000*. Juan Chackiel, Mario Isaacs, Dirección General de Estadística de Guatemala, Centro Latinoamericano de Demografía.

México: En la preparación de esta proyección participaron, El Colegio de México, la Dirección General de Estadística y Censos, y la Universidad Autónoma de México, además de CELADE.

Panamá: Esta proyección fue elaborada por la Dirección de Estadística y Censo de Panamá en colaboración con CELADE. Inédito, 1978.

Paraguay: Revisión realizada en 1980 por CELADE en colaboración con la Secretaría Técnica de Planificación de Paraguay.

Las proyecciones de los restantes nueve países de América Latina se elaboraron en CELADE, sin la participación directa de organismos nacionales de estos países.

Con respecto a los otros países y territorios de la región, la

información proviene o ha sido calculada a partir de proyecciones de población elaboradas recientemente por la División de Población de las Naciones Unidas.

Se espera contar próximamente con información detallada para aquellos estados independientes que se encuentran incluidos por ahora en la categoría "otros estados independientes y territorios" clasificados en anteriores *Boletines* como "Estados Asociados de las Indias Occidentales".

La denominada Zona del Canal de Panamá no ha sido incorporada aún en las proyecciones oficiales que se tienen para Panamá. Es por esta razón que se encuentra en la categoría de territorio.

Las cifras de población de los años calendario 1976 a 1979 y 1981 a 1984 que se presentan en este cuadro, se obtuvieron por interpolación de los valores que para los años terminados en 0 y 5 aparecen en las proyecciones anteriormente citadas.

La población del período 1970-2000 corresponde a la proyección con hipótesis de fecundidad media, o recomendada, de cada país.

CUADRO 2: En este cuadro se presentan tasas globales de fecundidad y tasas de fecundidad por edades, utilizadas en las proyecciones de población, por quinquenios para el período 1950-2000, según tres hipótesis de su evolución, por regiones y países.

Las tres hipótesis de evolución de la fecundidad tienen las tasas específicas y globales iguales para el período comprendido entre 1950 y 1970 (en algunos casos 1975), por cuanto corresponden a estimaciones basadas en datos observados. Las tasas globales y específicas de fecundidad que abarcan el resto del período hasta el año 2000 son aquellas que han sido proyectadas con hipótesis de evolución alta, media y baja.

CUADROS 3a, 3b y 3c: En estos cuadros se presentan para las proyecciones con hipótesis de fecundidad alta, media y baja, respectivamente, las tasas brutas de natalidad implícitas en ellas, por regiones y países según quinquenios para el período 1950-2000.

CUADROS 4a, 4b y 4c: En estos cuadros se presentan para las proyecciones con hipótesis de fecundidad alta, media y baja, respectivamente, los nacimientos anuales implícitos en ellas por regiones y países según quinquenios para el período 1950-2000.

EXPLANATORY NOTES

TABLE 1: Figures for the period 1920-1940 were derived from estimates appearing in the following publications:

- a) United Nations, *Demographic Yearbook*, Department of Economic and Social Affairs, New York, 1952 and 1960.
- b) United Nations, "Perspectivas de la población mundial evaluadas en 1963", in *Estudios Demográficos* N° 41, ST/SOA/Series A/41, New York, 1967.

Population data for the period 1950-2000 for the twenty Latin American countries are drawn from the projections recently elaborated by CELADE.

Some of the projections were prepared in collaboration with national institutions, as follows:

Argentina: CELADE revision of the projection made by the Instituto Nacional de Estadística y Censos of Argentina (INDEC). This revision related solely to the fertility projections starting in 1975.

Bolivia: Projection made by the Instituto Nacional de Estadística of Bolivia in co-operation with CELADE, 1979.

Brazil: The estimated values of the demographic variables for the period 1950-1975 are those submitted to the Seminar of the Panel on Brazil organized by the Committee on Population and Demography of the United States National Academy of Sciences and by the Brazilian Association of Population Studies in May 1979. The projections from 1975 to 2000 were prepared by CELADE.

Costa Rica: This projection was elaborated with the help from the Dirección General de Estadística y Censos (DGEC). The results have appeared in the publication *Evaluación del Censo de 1973 y Proyección de la población por sexo y grupos de edades, 1950-2000*. República de Costa Rica, Dirección General de Estadística y Censos, Latin American Demographic Centre, June, 1976.

Cuba: Projection prepared in 1979 by the Dirección de Demografía del Comité Estatal de Estadística de

Cuba, with the co-operation of the Latin American Demographic Centre (CELADE).

Chile: The projection was revised in 1977 by the Oficina de Planificación Nacional (ODEPLAN) and the Instituto Nacional de Estadística (INE), with the co-operation of CELADE.

El Salvador: The projection was elaborated in collaboration with the national institutions mentioned below and the results appear in the publication *La población de El Salvador por sexo y edad en el período 1950-2000. Principales indicadores demográficos*, República de El Salvador, Consejo Nacional de Planificación y Coordinación Económica (CONAPLAN), Dirección General de Estadística y Censos (DIGESTIC), San Salvador, El Salvador, 1976. (Provisional edition).

Guatemala: Projection prepared by the Dirección General de Estadística de Guatemala, with CELADE's co-operation, the results being published in *Guatemala: Proyección de la población por sexo y grupos de edades, 1950-2000*. Juan Chackiel, Mario Isaacs, Dirección General de Estadística de Guatemala, and CELADE.

Mexico: El Colegio de México, the Dirección General de Estadística y Censos, and the Universidad Autónoma de México participated in the preparation of this project, in addition to CELADE.

Panama: This projection was prepared by the Dirección de Estadística y Censo de Panamá, with the co-operation of CELADE. Unpublished, 1978.

Paraguay: Review made by CELADE in 1980 in collaboration with the Technical Planning Secretariat of Paraguay.

The projections for the other nine Latin American countries were elaborated by CELADE without direct participation of national institutions from these countries.

Regarding the *other countries and territories of the region*,

data have been derived or calculated from population projections recently elaborated by the United Nations Population Division.

It is expected that detailed information will shortly be available on the independent states now included under the category "other independent states and territories" classified in previous *Bulletins* as the West Indies Associated States.

The area known as the Panama Canal Zone has not yet been incorporated into the official projections for Panama. This is why it is included in the territory category.

Population figures for the calendar years 1976-1979 and 1981-1984 presented in this Table were obtained by interpolating the values corresponding to years ended in digits 0 and 5 appearing in the projections mentioned above.

Population for the period 1970-2000 corresponds to the projection with medium fertility hypothesis, or recommended projection for each country.

TABLE 2: This table gives total and age-specific fertility rates,

used in population projections, by five-year periods from 1950 to 2000, according to three hypotheses of evolution, by regions and countries.

The three hypotheses of the evolution of fertility have the same total and age-specific rates for the period between 1950 and 1970 (in some cases 1975), since they correspond to estimates based on observed data. The total and age-specific fertility rates covering the rest of the period up to the year 2000 are those projected on the basis of the high, medium and low-evolution hypotheses.

TABLES 3a, 3b and 3c: These tables present, for the projections with high, medium and low-fertility hypotheses respectively, the crude birth rates implicit in them, by regions and countries according to five-year periods from 1950 to 2000.

TABLES 4a, 4b and 4c: These tables present, for the projections with high, medium and low-fertility hypotheses respectively, the annual births implicit in them, by regions and countries according to five-year periods from 1950 to 2000.
